## Description

Klixon® thermostats have been in production for over 50 years. The 20413, 20600, and 20650 series thermostats are especially designed for applications where space, capacity and ease of assembly are important production factors. They are fixed-setting, snap-acting, automatic or manual reset temperature controls that are ideal for such applications as: air conditioners, heating and ventilating equipment, vending machines, dryers, unit heaters, tabletop appliances, etc.

All automatic series are available as limit switches (open on temperature rise) or fdan switches (close on temperature rise). Switch action is SPST, SPDT, or DPST with automatic reset types. Manual reset is available as a limit switch in SPST construction only.

The switch mechanism is actuated by the Klixon snap-action, bimetal disc which may be enclosed or exposed. Enclosed disc devices are particularly recommended for applications in which dust and lint are prevalent in the environment. Exposed disc types are used in applications where a faster thermal response to radiant heat is needed. Contact parts are enclosed for both disc types for protection against contamination.

## Mountings and Terminals

A variety of terminals and mounting flanges are available to meet installation requirements of most applications.

Flanges can be used for surface or thru-wall mountings; or, thermostats can be supplied without flanges for well or cavity-type mountings. Flange rotations are specified by looking down on the terminals and rotating the flange 30°, 45°, or 90° CW or CCW.

## Flanges Available

- Small oval bottom flange
- Integral surface flange
- No flange cup
- 3/4" deep cup
- Special oval bottom flange

Electrical connections to the thermostat must be tight; otherwise, resistance in a loose connection may cause sufficient temperature rise to affect the performance of the thermostat or damage the terminals or the lead wire insulation.

## Terminals Available

Quick connects are available in silver flash or plain brass.

- 1/4" Quick connects 0°, 30°, 45°, 90° terminals are male spade type .250" x .032" thick.

- Strap terminals for electric heating

- Brass screw terminals 0°, 45°

When screw terminals are specified, washer head screws are supplied unassembled. Assembled washer head screws are available at extra cost. Standard screw terminals have 8-32 NC-2 threads.

## Temperature Settings, Tolerances and Nominal Differentials

The ranges of temperature settings, tolerances, and nominal differentials shown below are available. Differential is the difference between opening and closing temperature in °F. For example, a thermostat which opens at 180°F and closes at 140°F has a 40° differential. (Lowest unit prices are achieved by selecting differentials in the 30°F to 59°F range). For temperature settings and differentials other than those shown, please consult Marketing.

## Standard Tolerances

		Open °F	Close °F

301 to 350 **	30 to 39	±7	±10
	40 to 59	±8	±12
	60 to 150	±9	±13

- Available in SPST construction only. SPDT thermostats must have 15° minimum differentials.

\*\*20413 series – up to 300°  
20600 series – up to 350°  
20650 / 54 series – up to 300°; minimum differential 30°.

## Manual Reset Construction

There are two basic manual reset constructions:

- 1) Manual Override – contacts can be closed at any time after device has actuated by depressing reset button.
- 2) Trip-Free – contacts will remain open after device has actuated until bimetal disc resets, even if reset button is depressed.
