| NOTES | |
|--------------|---|
| 1. | The digit average Luminous Intensity is obtained by summing the Luminous Intensity of each segment and dividing by the total number of segments excluding decimal points. Intensity will not vary more than $\pm 33.3\%$ between all segments within a digit. |
| 2. | All displays are categorized for Luminous Intensity. The Intensity category is marked on each part as a suffix letter to the part number. |
| 3. | Intensity adjusted for smaller areas of the "+" and decimal points. |
| 4. | Leads immersed to 1/16 inch from the body of the device. Maximum unit surface temperature is 140°C. |
| 5. | For flux removal, use Freon TF, Freon TE, Isoproponal, or water up to their boiling points. |
