Quad 2-Port Register

The MC74AC398/74ACT398 and MC74AC399/74ACT399 are the logical equivalents of a quad 2-input multiplexer feeding into four edge-triggered flip-flops. A common Select input determines which of the two 4-bit words is accepted. The selected data enters the flip-flop on the rising edge of the clock. The MC74AC399/74ACT399 is the 16-pin version of the MC74AC398/74ACT398, with only the Q outputs of the flip-flops available.

- Select Inputs from Two Data Sources
- Fully Positive Edge-Triggered Operation
- Both True and Complement Outputs — MC74AC398/74ACT398
- Outputs Source/Sink 24 mA
- 'ACT398 and 'ACT399 Have TTL Compatible Inputs

FUNCTIONAL DESCRIPTION

The MC74AC398/74ACT398 and MC74AC399/74ACT399 are high-speed quad 2-port registers. They select four bits of data from either of two sources (Ports) under control of a common Select input (S). The selected data is transferred to a 4-bit output register synchronous with the LOW-to-HIGH transition of the Clock input (CP). The 4-bit D-type output register is fully edge-triggered. The Data inputs (I_{0X} , I_{1X}) and Select input (S) must be stable only a setup time prior to and hold time after the LOW-to-HIGH transition of the Clock input for predictable operation. The MC74AC398/74ACT398 has both Q and $\bar{Q}$ outputs.

FUNCTION TABLE
