

## 7810 Video Receiver Module

The broadband 7810 video receiver module is a versatile, state-of-the-art solution for a variety of network applications.

### Features

- Wide 40 MHz—1000 MHz bandwidth supports as many as 110 CATV analog channels or a combination of analog/digital channels (e.g., 80/30), including HDTV broadcast
- Excellent frequency and distortion characteristics for high linearity
- Low noise (4.5 pA/ $\sqrt{\text{Hz}}$ , typ.), low power dissipation (1.35 W max.), as well as high RF output
- Internal impedance-match circuitry (75  $\Omega$ )
- Robust, small package with single-mode fiber pig-tail and connector options
- Wide operating temperature range,  $-40\text{ }^{\circ}\text{C}$  to  $+85\text{ }^{\circ}\text{C}$

### Applications

- Video signal distribution in HFC and FTTx nodes
- Video overlay in passive optical networks (PON)

### Description

The 7810 video receiver is a single-mode fiber pig-tailed module featuring a low-noise, impedance-matched broadband photodiode and RF amplification.

The device receives optical analog and/or digital signals for a range of video broadcast options, and delivers the corresponding RF electrical output. The wide bandwidth supports the delivery of up to 110 CATV analog signals or combination of analog and digital channels (80/30, for example), including HDTV broadcast.

The 7810 exhibits excellent distortion performance with values well above standards over the entire bandwidth and temperature specifications (40 MHz—1000 MHz,  $-40\text{ }^{\circ}\text{C}$  to  $+85\text{ }^{\circ}\text{C}$ ).

Moreover, the advanced impedance-match circuitry between the photodetector and RF amplification stages resolves a number of OEM design obstacles with very low typical noise performance value, not exceeding 4.5 pA/ $\sqrt{\text{Hz}}$ .

The 7810 video receiver can be used in both 1310 nm and 1550 applications, being useful at different points of a given network.

## Absolute Maximum Ratings

Stresses in excess of the absolute maximum ratings can cause permanent damage to the device. These are absolute stress ratings only. Functional operation of the device is not implied at these or any other conditions in excess of those given in the operational sections of the data sheet. Exposure to absolute maximum ratings for extended periods can adversely affect device reliability.

Parameter	Symbol	Min	Max	Unit
Operating Temperature Range	TOP	-40	85	°C
Storage Temperature Range	Tstg	-40	85	°C
Humidity at 85 °C	RH	—	95	%
Shock (1 ms duration; half sine wave: X, Y, Z axis)	—	—	100	g
Vibration (Single Sine): 5 MHz—100 MHz, 0.10 Oct/Min. 100 MHz—500 MHz, 0.25 Oct/Min.	—	—	0.5 3.0	g g

Note: For all tables, typical values are performed at 25 °C; min and max values are performance vs. temperature.

## Characteristics

**Table 1. Electrical/Optical Characteristics**

Parameter	Symbol	Min	Typ	Max	Unit
Optical Power	P <sub>IN</sub>	-10*	2	4*	dBm
Power Supply Bias, Pin 1	V <sub>CC</sub>	—	15	—	V
Bias, Pin 2	V <sub>CC</sub>	—	12	—	V
Wavelength	$\lambda$	1200	1310/1550	1600	nm
Responsivity	—	—	>0.85 at 1310 nm, >0.95 at 1550 nm	—	mA/mW mA/mW
Dissipation	P <sub>DISS</sub>	—	1.25	1.35	W

\* Depends on channel loading. Refer to the *7810 Video Receiver Module Application Note (TN01-002OPTO)*.

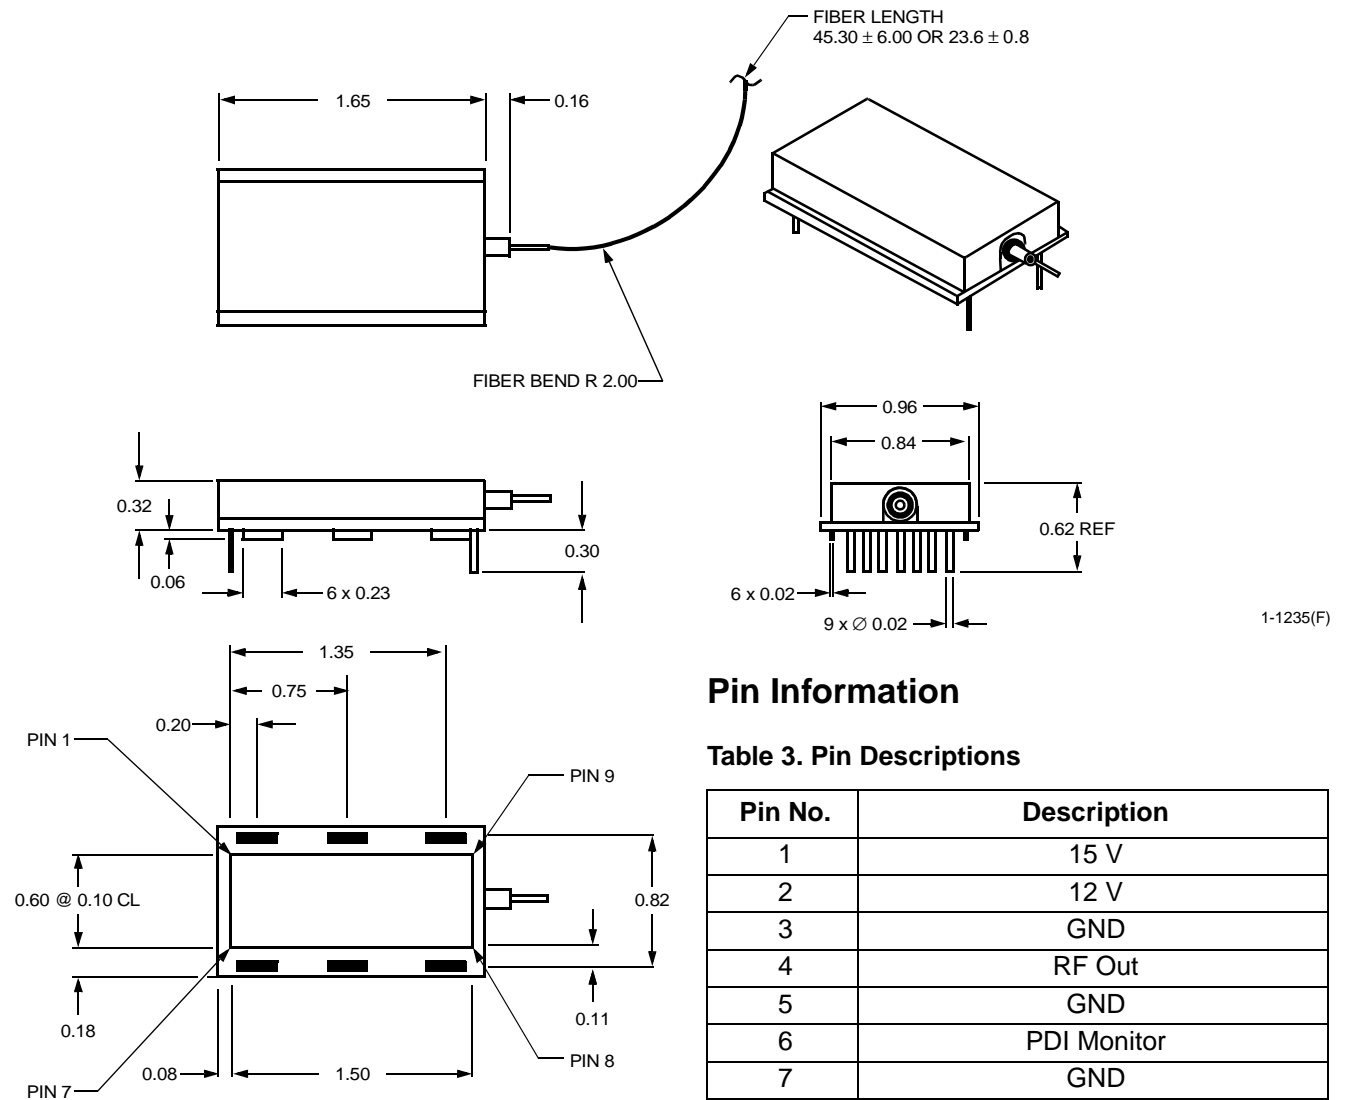

**Table 2. RF Characteristics**

Parameter	Symbol	Min	Typ	Max	Unit
Frequency Response	F	40	—	1000	MHz
Gain	G	16	17	18	dB
Ripple: 40 MHz—859 MHz 860 MHz—1 Ghz	—	—	±0.5 ±0.75	±0.6 ±0.85	dB dB
Output Return Loss	RL	-13	-11	-10	dB
Noise	—	4.0	4.5	5.0	pA/√Hz
Distortion (absolute value): <sup>1</sup> Composite Second-Order: 40 MHz—749 MHz 750 mHz—1 GHz Composite Triple Beat	CSO  CTB	67 65 82	70 67 85	— — —	dBc dBc dBc

1. Two laser test at 1310 nm/1550 nm. Each laser has 40% modulation index. Total received optical power is 2 dBm. Distortion products measured at 80 MHz, 450 MHz, 600 MHz, 745 MHz, and 850 MHz.
