

Li-Ion Power Gauge™ Module with Pack Supervisor

Features

- Complete and compact lithium ion gas gauge and protection solution for three or four series cells
- Accurate measurement of available battery capacity
- Provides overvoltage, undervoltage, and overcurrent protection
- Designed for battery pack integration
 - Small size
 - Includes bq2050 and bq2058 ICs
 - On-board charge and discharge control FETs
 - Low operating current for minimal battery drain
- High side FET control
- Battery capacity available through single-wire serial port
- “L” version includes 5 push-button activated LEDs to display state-of-charge information

General Description

The bq2167 Power Gauge Module provides a complete and compact battery management solution for Li-Ion battery packs. Designed for battery pack integration, the bq2167 combines the bq2050 Power Gauge IC with the bq2058 Supervisor IC on a small printed circuit board. The board includes all the necessary components to accurately monitor battery capacity and protect the cells from overvoltage, undervoltage, and overcurrent conditions. The board works with three or four Li-Ion series cells.

The Power Gauge IC uses the on-board sense resistor to track charge and discharge activity of the battery pack. Critical battery information can be accessed through the serial communications port at DQ. The supervisor circuit consists of the bq2058 and two FETs. The bq2058 controls the FETs to protect the batteries during charge/discharge cycles and short circuit conditions. The bq2167 provides contacts for the positive and negative terminals of each battery in the stack. Please refer to the bq2050 and bq2058 data sheets for the specifics on the operation of the power gauge and supervisor ICs.

Unitrode configures the bq2167 based on the information requested in Table 1. The configuration defines the number of series cells, the nominal battery pack capacity, the self-discharge rate, the Li-Ion battery type (coke

or graphite anode), and the threshold limits. Figure 1 shows how the module connects to the cells.

The bq2167L includes five LEDs to display remaining capacity in 20% increments of the learned capacity. The LEDs are activated with the onboard push-button switch.

A module development kit is also available for the bq2167. The bq2167B-KT or the bq2167LB-KT includes one configured module and the following:

- 1) An interface board that allows connection to the serial port of any AT-compatible computer.
- 2) Menu driven software to display charge/discharge activity and to allow user interface to the bq2050 from any standard DOS PC.

Pin Descriptions

POS	Pack positive
B1P	BAT_{1P}/Battery 1 positive input
B1N	BAT_{1N}/Battery 1 negative input
B2N	BAT_{2N}/Battery 2 negative input
B3N	BAT_{3N}/Battery 3 negative input
B4N	BAT_{4N}/Battery 4 negative input
ITEST	Overcurrent test input
DQ	Serial communications port
NEG	Pack negative

Absolute Maximum Ratings

Symbol	Parameter	Value	Unit	Conditions
V _{OP}	Supply voltage (B1P to B4N)	18	V	DC
V _{TR}	Maximum transient voltage (B1P to B4N)	32	V	Maximum duration = 1.5μs
V _{CHG}	Charging voltage (POS to NEG)	18	V	
I _{CHG}	Continuous charge/discharge current	3.9	A	V _{OP} > 6V T _A = 25°C
T _{OPR}	Operating temperature	0 to +70	°C	
T _{STG}	Storage temperature	-55 to +125	°C	

Note: Permanent device damage may occur if **Absolute Maximum Ratings** are exceeded. Functional operation should be limited to the Recommended DC Operating Conditions detailed in this data sheet. Exposure to conditions beyond the operational limits for extended periods of time may affect device reliability.

DC Electrical Characteristics (T_A = T_{OPR})

Symbol	Parameter	Minimum	Typical	Maximum	Unit	Conditions/Notes
V _{OP}	Operating voltage, B1P to B4N	4.0	-	18	V	
I _{CCA}	Operating current	-	-	350	μA	
R _{ON}	On resistance, B1P to POS	-	-	50	mΩ	T _A = 25°C V _{OP} = 10V

bq2167

DC Thresholds (T_A = T_{OPR})

Symbol	Parameter	Value	Tolerance	Unit	Notes
V _{OV}	Overvoltage threshold	4.25	± 50mV	V	
V _{CE}	Charge enable voltage	V _{OV} - 100mV	± 50mV	V	
V _{UV}	Undervoltage limit	2.25	± 100mV	V	
I _{OC}	Overcurrent limit	3.4		A	T _A = 25°C
		3.8		A	T _A = 60°C
t _{UVD}	Undervoltage delay	950	±50%	ms	T _A = 30°C
V _{CD}	Charge detect threshold	70	-60, +80	mV	
t _{OVD}	Overvoltage delay	950	±50%	ms	T _A = 30°C
t _{OCD}	Overcurrent delay	12	±60%	ms	T _A = 30°C

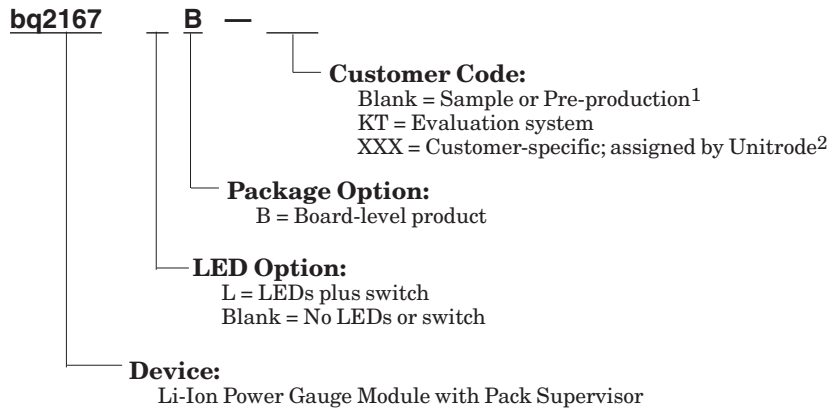

Note: The thresholds above reflect the operation of a bq2158 using the standard bq2058 IC (V_{OV} = 4.25V). Specify other versions of the bq2058 by indicating the appropriate V_{OV} threshold in Table 1.

1	All	From Preliminary to Final	

Note: Change 1 = May 1999 B changes from Apr. 1999.

Ordering Information

Notes: 1. Requires configuration sheet (Table 1)

IMPORTANT NOTICE

Texas Instruments and its subsidiaries (TI) reserve the right to make changes to their products or to discontinue any product or service without notice, and advise customers to obtain the latest version of relevant information to verify, before placing orders, that information being relied on is current and complete. All products are sold subject to the terms and conditions of sale supplied at the time of order acknowledgement, including those pertaining to warranty, patent infringement, and limitation of liability.

TI warrants performance of its semiconductor products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are utilized to the extent TI deems necessary to support this warranty. Specific testing of all parameters of each device is not necessarily performed, except those mandated by government requirements.

CERTAIN APPLICATIONS USING SEMICONDUCTOR PRODUCTS MAY INVOLVE POTENTIAL RISKS OF DEATH, PERSONAL INJURY, OR SEVERE PROPERTY OR ENVIRONMENTAL DAMAGE ("CRITICAL APPLICATIONS"). TI SEMICONDUCTOR PRODUCTS ARE NOT DESIGNED, AUTHORIZED, OR WARRANTED TO BE SUITABLE FOR USE IN LIFE-SUPPORT DEVICES OR SYSTEMS OR OTHER CRITICAL APPLICATIONS. INCLUSION OF TI PRODUCTS IN SUCH APPLICATIONS IS UNDERSTOOD TO BE FULLY AT THE CUSTOMER'S RISK.

In order to minimize risks associated with the customer's applications, adequate design and operating safeguards must be provided by the customer to minimize inherent or procedural hazards.

TI assumes no liability for applications assistance or customer product design. TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right of TI covering or relating to any combination, machine, or process in which such semiconductor products or services might be or are used. TI's publication of information regarding any third party's products or services does not constitute TI's approval, warranty or endorsement thereof.
