

# CAT5111

## 100-Tap Digitally Programmable Potentiometer (DPP™) with Buffered Wiper

### FEATURES

- 100-position linear taper potentiometer
- Non-volatile NVRAM wiper storage; buffered wiper
- Low power CMOS technology
- Single supply operation: 2.5V-6.0V
- Increment up/down serial interface
- Resistance values: 10kΩ, 50kΩ and 100kΩ
- Available in PDIP, SOIC, TSSOP and MSOP packages

### APPLICATIONS

- Automated product calibration
- Remote control adjustments
- Offset, gain and zero control
- Tamper-proof calibrations
- Contrast, brightness and volume controls
- Motor controls and feedback systems
- Programmable analog functions

### DESCRIPTION

The CAT5111 is a single digitally programmable potentiometer (DPP™) designed as a electronic replacement for mechanical potentiometers and trim pots. Ideal for automated adjustments on high volume production lines, they are also well suited for applications where equipment requiring periodic adjustment is either difficult to access or located in a hazardous or remote environment.

The CAT5111 contains a 100-tap series resistor array connected between two terminals  $R_H$  and  $R_L$ . An up/down counter and decoder that are controlled by three input pins, determines which tap is connected to the wiper,  $R_{WB}$ . The CAT5111 wiper is buffered by an op amp that operates rail to rail. The wiper setting, stored in non-volatile NVRAM memory, is not lost when the device is powered down and is automatically recalled when power is returned. The wiper can be adjusted to test new

system values without effecting the stored setting. Wiper-control of the CAT5111 is accomplished with three input control pins,  $\overline{CS}$ ,  $U/\overline{D}$ , and  $\overline{INC}$ . The  $\overline{INC}$  input increments the wiper in the direction which is determined by the logic state of the  $U/\overline{D}$  input. The  $\overline{CS}$  input is used to select the device and also store the wiper position prior to power down.

The digitally programmable potentiometer can be used as a buffered voltage divider. For applications where the potentiometer is used as a 2-terminal variable resistor, please refer to the CAT5113. The buffered wiper of the CAT5111 is not compatible with that application. DPPs bring variability and programmability to a broad range of applications and are used primarily to control, regulate or adjust a characteristic or parameter of an analog circuit.

### FUNCTIONAL DIAGRAM

**PIN CONFIGURATION**

**PIN DESCRIPTIONS**

**INC:** Increment Control Input

The  $\overline{INC}$  input (on the falling edge) moves the wiper in the up or down direction determined by the condition of the  $U/\overline{D}$  input.

**U/D:** Up/Down Control Input

The  $U/\overline{D}$  input controls the direction of the wiper movement. When in a high state and  $\overline{CS}$  is low, any high-to-low transition on  $\overline{INC}$  will cause the wiper to move one increment toward the  $R_H$  terminal. When in a low state and  $\overline{CS}$  is low, any high-to-low transition on  $\overline{INC}$  will cause the wiper to move one increment towards the  $R_L$  terminal.

**R<sub>H</sub>:** High End Potentiometer Terminal

$R_H$  is the high end terminal of the potentiometer. It is not required that this terminal be connected to a potential greater than the  $R_L$  terminal. Voltage applied to the  $R_H$  terminal cannot exceed the supply voltage,  $V_{CC}$  or go below ground,  $GND$ .

**R<sub>WB</sub>:** Wiper Potentiometer Terminal (Buffered)

$R_{WB}$  is the buffered wiper terminal of the potentiometer. Its position on the resistor array is controlled by the control inputs,  $\overline{INC}$ ,  $U/\overline{D}$  and  $\overline{CS}$ .

**R<sub>L</sub>:** Low End Potentiometer Terminal

$R_L$  is the low end terminal of the potentiometer. It is not required that this terminal be connected to a potential less than the  $R_H$  terminal. Voltage applied to the  $R_L$  terminal cannot exceed the supply voltage,  $V_{CC}$  or go below ground,  $GND$ .  $R_L$  and  $R_H$  are electrically interchangeable.

**CS:** Chip Select

The chip select input is used to activate the control input

**PIN FUNCTIONS**

Pin Name	Function
$\overline{INC}$	Increment Control
$U/\overline{D}$	Up/Down Control
$R_H$	Potentiometer High Terminal
$GND$	Ground
$R_{WB}$	Buffered Wiper Terminal
$R_L$	Potentiometer Low Terminal
$\overline{CS}$	Chip Select
$V_{CC}$	Supply Voltage

of the CAT5111 and is active low. When in a high state, activity on the  $\overline{INC}$  and  $U/\overline{D}$  inputs will not affect or change the position of the wiper.

**DEVICE OPERATION**

The CAT5111 operates like a digitally controlled potentiometer with  $R_H$  and  $R_L$  equivalent to the high and low terminals and  $R_{WB}$  equivalent to the mechanical potentiometer's wiper. There are 100 available tap positions including the resistor end points,  $R_H$  and  $R_L$ . There are 99 resistor elements connected in series between the  $R_H$  and  $R_L$  terminals. The wiper terminal is connected to one of the 100 taps and controlled by three inputs,  $\overline{INC}$ ,  $U/\overline{D}$  and  $\overline{CS}$ . These inputs control a seven-bit up/down counter whose output is decoded to select the wiper position. The selected wiper position can be stored in nonvolatile memory using the  $\overline{INC}$  and  $\overline{CS}$  inputs.

With  $\overline{CS}$  set LOW the CAT5111 is selected and will respond to the  $U/\overline{D}$  and  $\overline{INC}$  inputs. HIGH to LOW transitions on  $\overline{INC}$  will increment or decrement the wiper (depending on the state of the  $U/\overline{D}$  input and seven-bit counter). The wiper, when at either fixed terminal, acts like its mechanical equivalent and does not move beyond the last position. The value of the counter is stored in nonvolatile memory whenever  $\overline{CS}$  transitions HIGH while the  $\overline{INC}$  input is also HIGH. When the CAT5111 is powered-down, the last stored wiper counter position is maintained in the nonvolatile memory. When power is restored, the contents of the memory are recalled and the counter is set to the value stored.

With  $\overline{INC}$  set low, the CAT5111 may be de-selected and powered down without storing the current wiper position in nonvolatile memory. This allows the system to always power up to a preset value stored in nonvolatile memory.

**OPERATING MODES**

$\overline{INC}$	$\overline{CS}$	$U/\overline{D}$	Operation
High to Low	Low	High	Wiper toward $R_H$
High to Low	Low	Low	Wiper toward $R_L$
High	Low to High	X	Store Wiper Position
Low	Low to High	X	No Store, Return to Standby
X	High	X	Standby

**ABSOLUTE MAXIMUM RATINGS**

Supply Voltage $V_{CC}$ to GND	-0.5V to +7V
Inputs $\overline{CS}$ to GND	-0.5V to $V_{CC} + 0.5V$
$\overline{INC}$ to GND	-0.5V to $V_{CC} + 0.5V$
$U/\overline{D}$ to GND	-0.5V to $V_{CC} + 0.5V$
$R_H$ to GND	-0.5V to $V_{CC} + 0.5V$
$R_L$ to GND	-0.5V to $V_{CC} + 0.5V$
$R_{WB}$ to GND	-0.5V to $V_{CC} + 0.5V$

Operating Ambient Temperature

Commercial ('C' or Blank suffix)	0°C to +70°C
Industrial ('I' suffix)	-40°C to +85°C
Junction Temperature	+150°C
Storage Temperature	-65°C to +150°C
Lead Soldering (10 sec max)	+300°C

\* Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. Absolute Maximum Ratings are limited values applied individually while other parameters are within specified operating conditions, and functional operation at any of these conditions is NOT implied. Device performance and reliability may be impaired by exposure to absolute rating conditions for extended periods of time.

**RELIABILITY CHARACTERISTICS**

Symbol	Parameter	Test Method	Min	Typ	Max	Units
$V_{ZAP}^{(1)}$	ESD Susceptibility	MIL-STD-883, Test Method 3015	2000			Volts
$I_{LTH}^{(1)(2)}$	Latch-Up	JEDEC Standard 17	100			mA
$T_{DR}$	Data Retention	MIL-STD-883, Test Method 1008	100			Years
$N_{END}$	Endurance	MIL-STD-883, Test Method 1003	1,000,000			Stores

**DC Electrical Characteristics:  $V_{CC} = +2.5V$  to  $+6.0V$  unless otherwise specified**

**Power Supply**

Symbol	Parameter	Conditions	Min	Typ	Max	Units
$V_{CC}$	Operating Voltage Range		2.5	—	6.0	V
$I_{CC1}$	Supply Current (Increment)	$V_{CC} = 6V, f = 1MHz, I_W=0$ $V_{CC} = 6V, f = 250kHz, I_W=0$	—	—	200 100	$\mu A$
$I_{CC2}$	Supply Current (Write)	Programming, $V_{CC} = 6V$ $V_{CC} = 3V$	—	—	1 500	mA $\mu A$
$ISB_1^{(2)}$	Supply Current (Standby)	$CS = V_{CC} - 0.3V$ $U/\overline{D}, INC = V_{CC} - 0.3V$ or GND	—	75	150	$\mu A$

**Logic Inputs**

Symbol	Parameter	Conditions	Min	Typ	Max	Units
$I_{IH}$	Input Leakage Current	$V_{IN} = V_{CC}$	—	—	10	$\mu A$
$I_{IL}$	Input Leakage Current	$V_{IN} = 0V$	—	—	-10	$\mu A$
$V_{IH1}$	TTL High Level Input Voltage	$4.5V \leq V_{CC} \leq 5.5V$	2	—	$V_{CC}$	V
$V_{IL1}$	TTL Low Level Input Voltage		0	—	0.8	V
$V_{IH2}$	CMOS High Level Input Voltage	$2.5V \leq V_{CC} \leq 6V$	$V_{CC} \times 0.7$	—	$V_{CC} + 0.3$	V
$V_{IL2}$	CMOS Low Level Input Voltage		-0.3	—	$V_{CC} \times 0.2$	V

- NOTES:**
- (1) This parameter is tested initially and after a design or process change that affects the parameter.
  - (2) Latch-up protection is provided for stresses up to 100mA on address and data pins from -1V to  $V_{CC} + 1V$
  - (3)  $I_W$ =source or sink
  - (4) These parameters are periodically sampled and are not 100% tested.

## Potentiometer Parameters

Symbol	Parameter	Conditions	Min	Typ	Max	Units
R <sub>POT</sub>	Potentiometer Resistance	-10 Device		10		kΩ
		-50 Device		50

t <sub>WR</sub>	Store Cycle	—	5	10	ms

**A. C. TIMING**

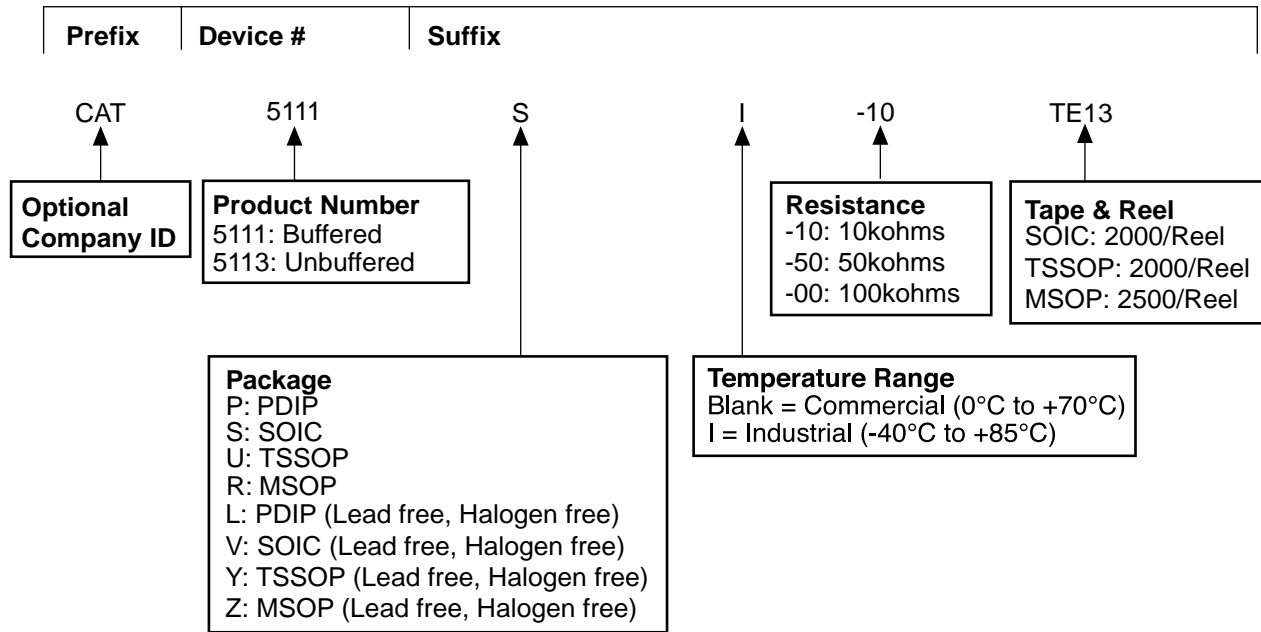

(1) Typical values are for T<sub>A</sub>=25°C and nominal supply voltage.

(2) This parameter is periodically sampled and not 100% tested.

(3) MI in the A.C. Timing diagram refers to the minimum incremental change in the W output due to a change in the wiper position.

**ORDERING INFORMATION**

**Notes:**

(1) The device used in the above example is a CAT5111 SI-10TE13 (SOIC, 10K Ohms, Industrial Temperature, Tape & Reel)

**REVISION HISTORY**

Date	Rev.	Reason
3/10/2004	M	Updated Potentiometer Parameters
3/29/2004	N	Changed Green Package marking for SOIC from W to V
4/12/2004	O	Updated Reel Ordering Information
