

Improved Triple 85MHz CRT Driver

Not recommended for new design. See CVA2400A.

CVA2417TX

FEATURES

- Bandwidth 85MHz
- Fall Time 3.8ns
- Rise Time 4.4ns
- Swing 50 V_{P-P}
- Excellent Gray Scale Linearity
- Supply Voltage 80V
- Pin to Pin Compatible with CVA2415T

APPLICATIONS

- CRT Driver for 1280 x 1024 and 1024 x 768 Color Monitors

DESCRIPTION

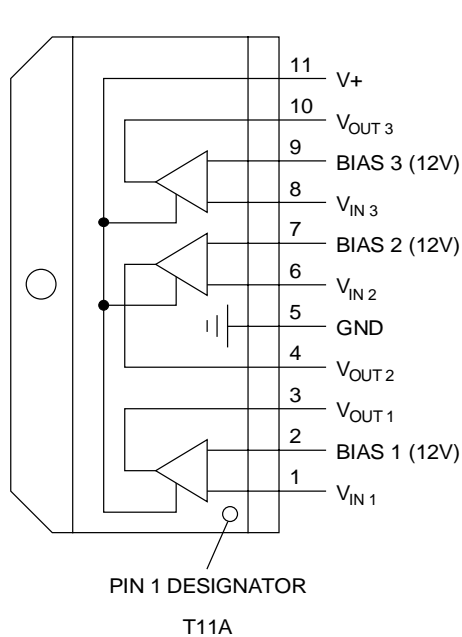

The CVA2417TX is an improved version that features excellent gray scale linearity with no crossover distortion and less EMI. Designed especially to drive high resolution monitor for resolution up to 1280 x 1024 (non-interlaced) with pixel frequency up to 160MHz.

The part is housed in the industry standard 11-lead TO-220 molded power package. The heat sink is floating and may be grounded for ease of manufacturing and RFI shielding.

APPLICATION INFORMATION

The CVA2417TX is a high voltage triple CRT driver suitable for VGA, Super VGA, IBM® 8514, 1280 x 1024 and 1024 x 768 non-interlaced display applications. The CVA2417TX features 80V operation and low power dissipation. The part is housed in the industry standard 11 lead TO-220 molded power package. The heat sink is floating and may be grounded for ease of manufacturing and RFI shielding.

Thermal Considerations

The transfer characteristics of the amplifier are shown in *Figure 2*. Since this is a class A input stage, power supply current increases as the input signal increases and consequently power dissipation also increases. Average dissipation per stage is 2.8W, increasing to 4.8W at minimum output voltage.

The CVA2417TX cannot be used without heat sinking. *Figure 2* shows the power dissipated in each channel over the operating voltage range of the device, Typical "average" power dissipation with the device output voltage at one half the supply voltage is 2.8W per channel for a total dissipation of 8.4W package dissipation. Under white screen conditions, i.e.: 15V output, dissipation increases to 4.8W per channel or 14.4W total. The CVA2417TX case temperature must be maintained below +100°C. If the maximum expected ambient temperature is +50°C, then a heat sink is needed with thermal resistance equal to or less than:

$$R_{th} = \frac{(100 - 50^{\circ}\text{C})}{14.4\text{W}} = 3.5^{\circ}\text{C/W}$$

FIGURE 2. CVA2417TX DC Characteristics

The Thermalloy #14754 is one example of a heatsink that meets this requirement.

The CVA2417TX maximum load is 600Ω to ground or V⁺.

The output of CVA2417TX is not short circuit proof. Any resistance to V⁺ or Ground should be > 600Ω.
