

CMOS 8-bit Single Chip Microcomputer

Description

The CXP819P60 is a CMOS 8-bit micro-computer which consists of A/D converter, serial interface, timer/counter, time base timer, vector interruption, high precision timing pattern generation circuit, PWM generator, PWM for tuner, 32kHz timer/event counter, remote control receiving circuit, general purpose prescaler, and external signal, as well as basic configurations like 8-bit CPU, PROM, RAM and I/O port. They are integrated into a single chip.

Also the CXP819P60 provides sleep/stop function which enables to lower power consumption and ultra-low speed instruction mode in 32kHz operation.

This IC is the PROM-incorporated version of the CXP81960 with built-in mask ROM. This provides the additional feature of being able to write directly into the program. Thus, it is most suitable for evaluation use during system development and for small-quantity production.
