

## Current Mode PWM Controller

The DBL3842A is fixed PWM controller for Off-line and DC-DC converter applications. The internal circuits include UVLO, low start up current circuit, temperature compensated reference, highgain error amplifier, current sensing comparator, and high current totempole output for driving a power MOSFET. Also DBL3842A provide low start up current below 0.3 mA and short shutdown delay time typical 100nsec. DBL3842A have UVLO threshold of 16V(on) and 10V(off).

## FEATURES

- Low start up current < 0.3 mA
- Operating range up to 500 KHz
- Cycle by cycle current limiting
- Under Voltage Lock Out with hysteresis
- Short shutdown delay time ; typical 100nsec
- High current totempole output
- Output swing limiting : 22V
