

**400mA High PSRR, LDO Regulators****Features**

- Low, 90µA No-Load Supply Current
- Guaranteed 400mA Output Current
- PSRR=65dB @ 120Hz; 55dB @ 1kHz
- Over-Temperature Protection and Short-Circuit Protection
- Output Voltage: 1.20V~5.00V (G9161-XXX)
- Stable with low cost ceramic capacitors

Applications

- CD ROM or DVD ROM
- DVD Player
- Audio Codec

General Description

The G9161 series is a low supply current, high PSRR, and low dropout linear regulator that comes in a SOT-89, SOT-223, TO-252 and SOP-8 with Power PAD package. The supply current at no-load is 90µA. Operating voltage range is from 2.50V to 5.50V. The over-current protection limit is set at 550mA typical. An over-temperature protection circuit is built-in in the Device to prevent thermal overload.

The output voltage range is from 1.2V to 5.0V.

Ordering Information

ORDER NUMBER	MARKING	VOLTAGE	TEMP. RANGE	PACKAGE (Pb free)
G9161-120T25U	9161AA	1.2V	-40°C~ +85°C	SOT-89
G9161-120T45U	9161-120	1.2V	-40°C~ +85°C	TO-252
G9161-120T65U	9161-120	1.2V	-40°C~ +85°C	SOT-223
G9161-120F1U	9161AA	1.2V	-40°C~ +85°C	SOP-8 (FD)

Pin Description

PIN				NAME	FUNCTION
SOT-89	TO-252	SOT-223	SOP-8 (FD)		
1	1	1	1,2	IN	Regulator Input. Supply voltage can range from +2.5V to +5.5V. Bypass with 1 μ F to GND
2	2	2	6	GND	Ground. This pin also functions as a heatsink. Solder to large pads on the circuit board ground plane to maximize thermal dissipation.
3	3	3	3,4	OUT	Regulator Output. Sources up to 300mA. Bypass with a 1 μ F, <0.2 Ω typical ESR capacitor to GND.
			5,7,8	NC/GND	Connect to GND for heatsink.
			Thermal Pad		Recommend connecting the Thermal Pad to the GND for excellent power dissipation.

Detailed Description

Over Current Protection

The G9161 uses a current sense-resistor to monitor the output current. A portion of the PMOS output transistor's current is mirrored to a resistor such that the voltage across this resistor is proportional to the output current. Once the output current exceeds limit threshold, G9161 would be protected with a limited output current. Further more, when the output is short to ground, the output current would be folded-back to a less limit.

Over Temperature Protection

To prevent abnormal temperature from occurring, the G9161 has a built-in temperature monitoring circuit. When it detects the temperature is above 145°C, the output transistor is turned off. When the IC is cooled down to below 120°C, the output is turned on again. In this way, the G9161 will be protected against abnormal junction temperature during operation.

Applications Information

Capacitor Selection and Regulator Stability

Normally, use a 1 μ F capacitor on the input and a 1 μ F capacitor on the output of the G9161. Larger input capacitor values and lower ESR provide better supply-noise rejection and transient response. A higher-value input capacitor (10 μ F) may be necessary if large, fast transients are anticipated and the device is located several inches from the power source.

Power-Supply Rejection and Operation from Sources Other than Batteries

The G9161 is designed to deliver low dropout voltages and low quiescent currents in battery powered systems. Power-supply rejection is 65dB at low frequencies. As the frequency increases above 20kHz, the output capacitor is the major contributor to the rejection of power-supply noise.

When operating from sources other than batteries, improve supply-noise rejection and transient response by increasing the values of the input and output capacitors, and using passive filtering techniques.

Load Transient Considerations

The G9161 load-transient response graphs show two components of the output response: a DC shift of the output voltage due to the different load currents, and the transient response. Typical overshoot for step changes in the load current from 10mA to 300mA is 8mV. Increasing the output capacitor's value and decreasing its ESR attenuates transient spikes.

Input-Output (Dropout) Voltage

A regulator's minimum input-output voltage differential (or dropout voltage) determines the lowest usable supply voltage. In battery-powered systems, this will determine the useful end-of-life battery voltage. Because the G9161 use a P-channel MOSFET pass transistor, their dropout voltage is a function of $R_{DS(ON)}$ multiplied by the load current.

E	3.30	3.70	0.130	0.146
e	2.30 BSC		0.090 BSC	
e1	4.60 BSC		0.181 BSC	
H	6.70	7.30	0.264	0.287
L	0.90 MIN		0.036 MIN	
L2	0.06 BSC		0.0024 BSC	
α	0°	10°	0°	10°

SOP-8 (FD) Package

Note:

1. JEDEC Outline: MS-012 AA/E.P. Version: N/A
2. Dimension "D" does not include mold flash, protrusions or gate burrs. Mold flash, protrusions and gate burrs shall not exceed .15mm (.006in) per side.
3. Dimensions "E" does not include inter-lead flash, or protrusions inter-lead flash and protrusions shall not exceed .25mm (.010in) per side.

SYMBOL	DIMENSION IN MM		DIMENSION IN INCH	
	MIN.	MAX.	MIN.	MAX.
A	1.397	1.753	0.053	0.069
