12-stage binary counter

HEF4040B
MSI

DESCRIPTION

The HEF4040B is a 12-stage binary ripple counter with a clock input ($\overline{CP}$), an overriding asynchronous master reset input (MR) and twelve fully buffered outputs (O_0 to O_{11}). The counter advances on the HIGH to LOW transition of $\overline{CP}$. A HIGH on MR clears all counter stages and forces all outputs LOW, independent of $\overline{CP}$. Each counter stage is a static toggle flip-flop. Schmitt-trigger action in the clock input makes the circuit highly tolerant to slower clock rise and fall times.

PINNING

- $\overline{CP}$ clock input (HIGH to LOW edge-triggered)
MR master reset input (active HIGH)
 O_0 to O_{11} parallel outputs

APPLICATION INFORMATION

Some examples of applications for the HEF4040B are:

- Frequency dividing circuits
- Time delay circuits
- Control counters
