General Description

The HMC409LP4 & HMC409LP4E are high efficiency GaAs InGaP HBT MMIC Power amplifiers operating from 3.3 to 3.8 GHz. The amplifier is packaged in a low cost, leadless SMT package. Utilizing a minimum of external components the amplifier provides 31 dB of gain and +32.5 dBm of saturated power from a +5.0V supply voltage. The power control (Vpd) can be used for full power down or RF output power/current control. For +22 dBm OFDM output power (64 QAM, 54 Mbps), the HMC409LP4 & HMC409LP4E achieve an error vector magnitude (EVM) of 2%, meeting WiMAX 802.16 linearity requirements.

Electrical Specifications, $T_A = +25^\circ C$, $V_s = +5V$, $V_{pd} = +5V$, $V_{bias} = +5V$

Pin Descriptions

Pin Number	Function	Description	Interface Schematic
1-3, 5, 6, 8, 10 -14, 18, 19, 21, 22, 24	N/C	No connection required. These pins may be connected to RF/DC ground without affecting performance.	
4	RFIN	This pin is AC coupled and matched to 50 Ohms from 3.3 - 3.8 GHz.	
7	Vpd	Power control pin. For maximum power, this pin should be connected to 5.0V thru a 56 Ω resistor. A high-voltage or small resistor is not recommended for lower idle current. This voltage can be reduced or the resistor increased.	
9	Vbias	DC power supply pin for bias circuitry	
15, 16, 17	RFOUT	RF output and DC bias for the output stage.	
20	VCC2	Power supply voltage for the second amplifier stage. External bypass capacitors and pull up choke are required as shown in the application schematic.	
23	VCC1	Power supply voltage for the first amplifier stage. External bypass capacitors are required as shown in the application schematic.	
	GND	Ground: Backside of package has exposed metal ground slug that must be connected to ground thru a short path. Vias under the device are required.

[2] Circuit Board Material: Rogers 4350, Er = 3.48

The circuit board used in the final application should use RF circuit design techniques. Signal lines should have 50 ohm impedance while the package ground leads and exposed paddle should be connected directly to the ground plane similar to that shown. A sufficient number of VIA holes should be used to connect the top and bottom ground planes. The evaluation board should be mounted to an appropriate heat sink. The evaluation circuit board shown is available from Hittite upon request.
