DRIVE FEATURES:

- High Output Drivers: ±24mA
- Reduced system switching noise

DESCRIPTION:

This quadruple 2-input positive-AND gate is built using advanced dual metal CMOS technology. The LVC08A device performs the Boolean function $Y = A \cdot B$ or $Y = \overline{A + B}$ in positive logic.

The LVC08A has been designed with a ±24mA output driver. This driver is capable of driving a moderate to heavy load while maintaining speed performance.

Inputs can be driven from either 3.3V or 5V devices. This feature allows the use of this device as a translator in a mixed 3.3V/5V system environment.

APPLICATIONS:

- 5V and 3.3V mixed voltage systems
- Data communication and telecommunication systems
