

Single Event and Total Dose Hardened, High-Speed, Dual Output PWM

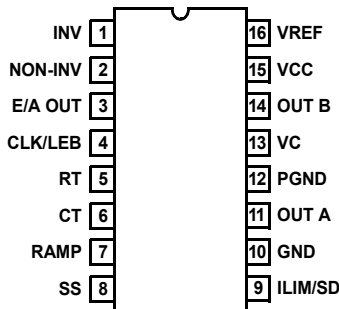

The single event and total dose hardened IS-1825ASRH pulse width modulator is designed to be used in high frequency, switching power supplies in either voltage or current-mode configurations. The design includes a precision voltage reference, a low power start-up circuit, a high frequency oscillator, a wide-band error amplifier and a fast current-limit comparator. The use of proprietary process capabilities and unique design techniques results in fast propagation delay times and high output current over a wide range of output voltages.

Constructed with the Intersil Rad-hard Silicon Gate (RSG) dielectrically isolated BiCMOS process, these devices are immune to single event latch-up and have been specifically designed to provide a high level of immunity to single event transients. All specified parameters are guaranteed and tested for 300krad(Si) total dose performance.

Detailed Electrical Specifications for these devices are contained in SMD 5962-02511. A “hot-link” is provided on our website for downloading the SMD.
