

CIRCUIT FOR ELECTRON PEDOMETER - ERGOMETER**DESCRIPTION**

The chip is a silicon-gate CMOS LSIs for electron pedometer-ergometer with function watch and alarm. Its provides count and indication of steps, calories, kilometers during current day and night and summing up at changing 24 hours, steps , calories, kilometers with values stored previous (mode «TOTAL DATA »). Length of steps setting from 25 to 95 centimeters. Frequency of registered pulses from external sensor at counting steps is no more than 6Hz at duration of time between the end of previous and beginning of counted pulse no less than 100 ms. Counting steps to 999999.

FEATURES

- One-chip CMOS constructions
- Single 1.5V battery operation
- Imbed in chip element of quartz generator with operating frequency of 32768 Hz, capacity, resistor, and voltage doubler
- Built-in LCD driver for control of 7-digit LCD in the mode of two level multiplexing with the mode marks "STEPS", "km", "KCAL", "COEFF", "L STEP", "ALARM", "TODAY", "TOTAL", divided by colons and dots.
- Operation from one battery with the voltage of 1.5V, low consumption power;
- Availability of circuits of contacts bracing suppression on buttons inputs;
- Frequency of registered pulses from external sensor at counting steps is no more than 6Hz at duration of time between the end of previous and beginning of counted pulse no less than 100 ms;
- Conversion of quantity of steps into calories , kilometers

FUNCTIONS

- 5 functions for counting time and calendar with indication of hours, minutes, seconds, month, date ;
- Alarm clock;
- Count the quantity of steps by means of evaluation and counting pulses from external sensor ;
- count and indication of steps, calories, kilometers during current day and night (mode « DATA OF THE CURRENT DAY»);
- Conversion of made steps into calories with consideration of the user coefficient with consideration of height, weight and male/female identification;
- summation up at changing 24 hours, steps , calories, kilometers with values stored previous (mode «TOTAL DATA»).

ABSOLUTE MAXIMUM RATINGS (T_a = 25°C)

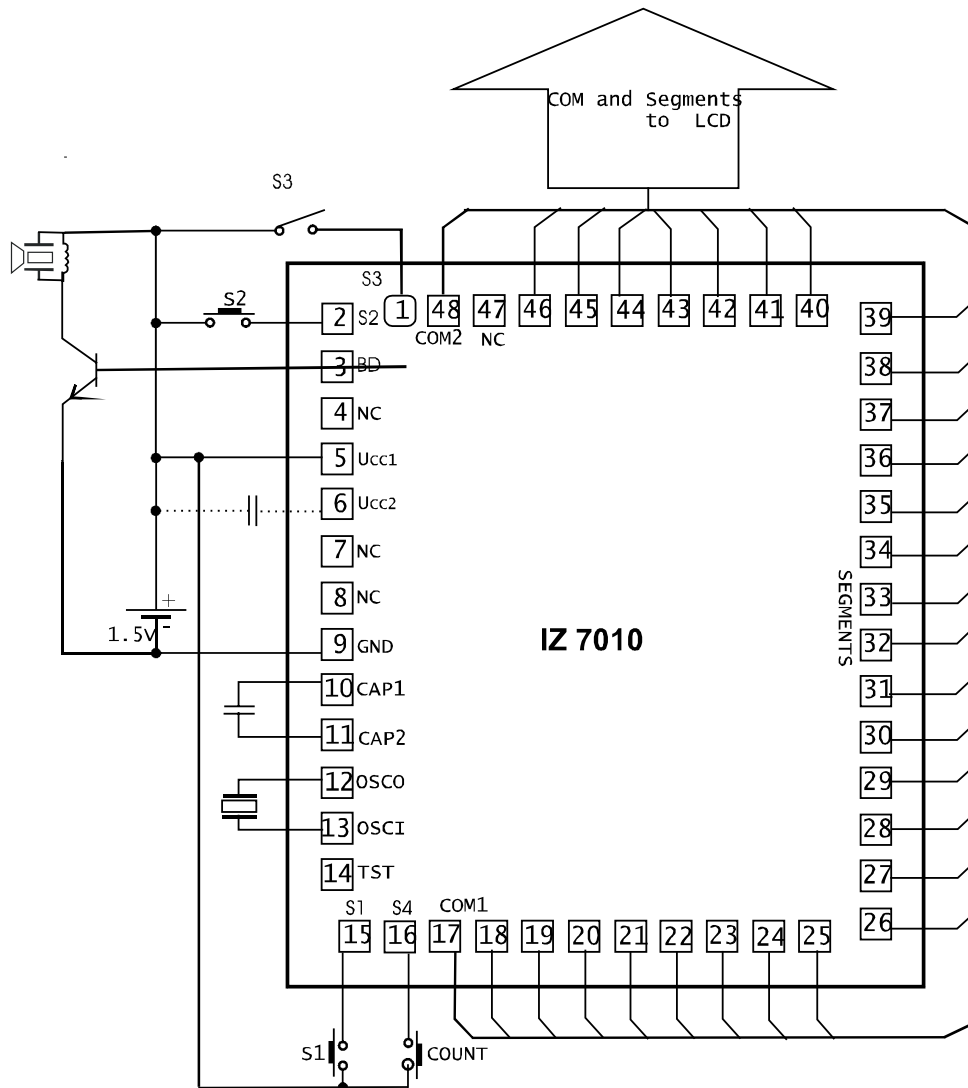

Characteristic	Symbol	Value	Unit
Supply Voltage	U _{CC1}	- 0.3 ~ + 2.0	V
Operating Temperature	T _{por}	- 0 ~ + 70	°C
Storage Temperature	T _{stg}	- 55 ~ + 125	°C

USER'S SETTING

Calories Count Algorithm

Count of calories, consumed in walk, is performed by 5 steps by means of multiplication of the user coefficient by the movement rate coefficient.

$$CAL = RATIO * C RATE ;$$

where : RATIO – user coefficient – number of calories, consumed per 1 step with the movement rate of 60 steps per minute. It is entered by the user in the entry mode of the user settings. Range of values is from 5.00 to 25.00;

C RATE – coefficient of movement rate. It is calculated automatically during walk depending on the movement rate by each 5 steps in compliance with the table:

Table .1

Movement rate, steps/min	00-65	66-75	76-85	86-95	96-105	106-115	116-125	126-135	136-145	Over 145
C RATE – movement rate coefficient	5	8	11	15	19	23	28	32	36	38

For instance:

$$Rate = (5 \text{ steps} / 4 \text{ seconds}) * 60 \text{ seconds} = 75 \text{ steps per minute, C RATE} = 8;$$

User coefficient RATIO is selected in dependence on height, weight and male/female identification of human.

Tentative values of the user coefficient are listed in Table 1 for women and in Table 2 for men.

Tentative values of the user coefficient for women

Table 1

WEIGHT	HEIGHT					
	140	150	160	170	180	190
50	6,39	6,52	6,73	7,01	7,37	7,79
60	7,67	7,82	8,07	8,42	8,85	9,35
70	8,95	9,12	9,42	9,82	10,32	10,91
80	10,23	10,43	10,46	11,22	11,79	12,47
90	11,50	11,73	12,11	12,63	13,27	14,02
100	12,78	13,03	13,45	14,03	14,74	15,58
110	14,06	14,34	14,80	15,43	16,22	17,14
120	15,34	15,64	16,15	16,84	17,64	18,70

IZ7010

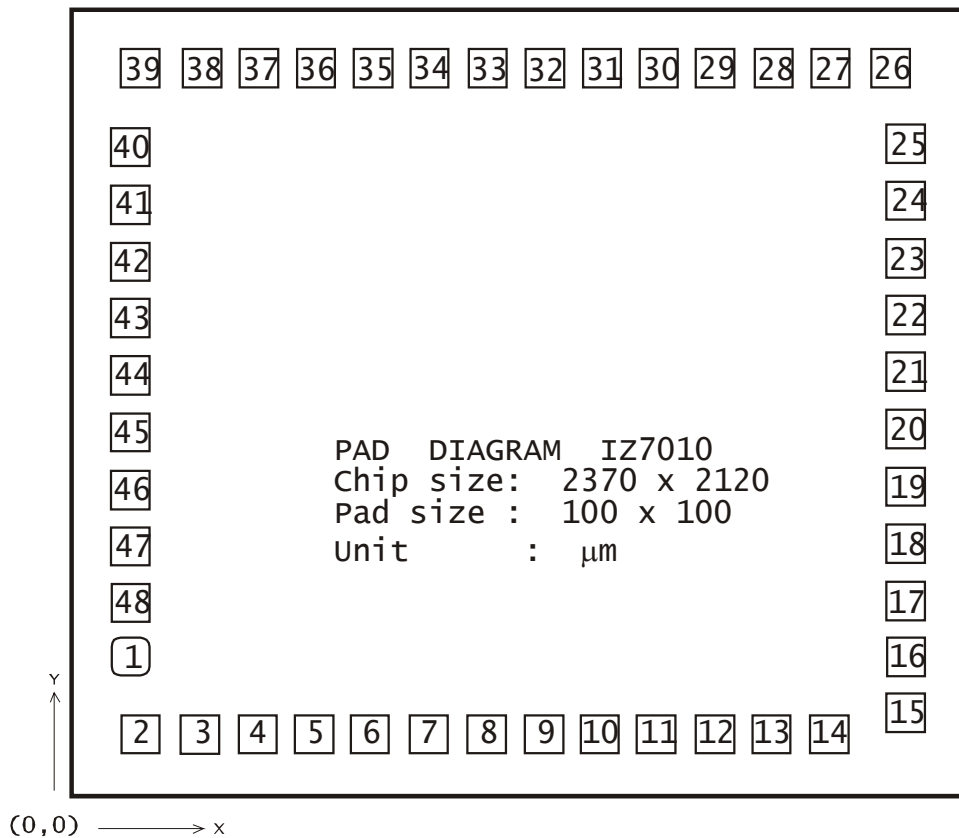

Tentative values of user coefficient for men

Table 2

WEIGHT	HEIGHT					
	150	160	170	180	190	200
50	7,86	7,94	8,11	8,36	8,68	9,07
60	9,43	9,52	9,73	10,03	10,42	10,8
70	11,00	11,11	11,35	11,70	12,15	12,69
80	12,57	12,70	12,97	13,37	13,89	14,51
90	14,14	14,28	14,59	15,04	15,62	16,32
100	15,71	15,87	16,21	16,71	17,36	18,14
110	17,28	17,46	17,83	18,39	19,09	19,95
120	18,85	19,05	19,46	20,06	20,83	21,76

For instance, for a woman with a weight of 63 kg and height of 174 cm the tentative value of the user coefficient $RATIO=8.42$ cal.
