Sample Application Circuit and Test Circuit (AC input VU meter)

* Capacitor to be omitted when used as a DC-input signal meter.

- C_1, R_1 time constant:
The response time can be varied by varying the C_1, R_1 time constant (mainly the C_1 value).

Continued on next page.

Continued from preceding page.

When the C_1, R_1 time constant is larger:

..... The response time (attack time and release time) is made slower.

When the C_1, R_1 time constant is smaller:

..... The response time (attack time and release time) is made faster.

- Considerations relative to P_d max of the package:

Due to the constant current I_{LED} , most of the power consumed by the circuits is consumed within the IC.

When lighting the five LEDs continuously for a prolonged length of time, make sure that V_{CC} does not exceed:

LB1403N, 1413N, 1443N $V_{CC}=9V$

LB1423N, 1433N $V_{CC}=14V$

When using a higher power supply voltage, insert a resistor in series with the LEDs to restrain the power consumed within the IC package.

For LB1403N, 1413N, 1443N:

For LB1423N, 1433N:
