

LC723732/40/48/56/64

ETR Microcontrollers

Overview

The LC723700 Series are large-capacity ETR microcontrollers that achieve an instruction execution time of 1.33 μ s and provide up to 64 KB of ROM and up to 2 KB of RAM. They include an on-chip high-performance PLL circuit that features an added high-speed lock circuit and can control the C/N characteristics of a local oscillator. They also provide a rich set of on-chip interface circuits, including a 3-channel serial I/O port, and an 8-input 8-bit A/D converter.

Functions

- ROM
 - Up to 32K steps (32,767 \times 16 bits)
 - The subroutine area holds 4 K steps (4,096 \times 16 bits)
- RAM
 - Up to 4 K \times 4 bits (In banks 00 through 3F)
 - LC723732 – ROM: 32 KB, RAM 1 KB
 - LC723740 – ROM: 40 KB, RAM 2 KB
 - LC723748 – ROM: 48 KB, RAM 2 KB
 - LC723756 – ROM: 56 KB, RAM 2 KB
 - LC723764 – ROM: 64 KB, RAM 2 KB
- Stack
 - 32 levels
- Serial I/O
 - Three channels. These circuits can support both 2-wire and 3-wire 8-bit communication techniques, and can be switched between MSB first and LSB first operation.
 - One of six internally generated serial transfer clock rates can be selected: 12.5, 37.5, 187.5, 281.25, 375, and 450 kHz.
- External interrupts
 - Seven interrupt inputs (pins INT0 through INT5, and the HOLD pin)
 - These interrupts can be set to switch between rising and falling edges, although the HOLD pin only supports falling edge detection.
- Internal interrupts
 - Seven interrupts; four internal timer interrupts, and three serial I/O interrupts.
- Interrupt nesting levels
 - 16 levels
 - Interrupt are prioritized in hardware as follows:
 - HOLD pin > INT0 pin > INT1 pin > INT2 pin > INT3 pin > INT4 pin > INT5 pin > S-I/O0 > S-I/O1 > S-I/O2 > internal TMR0 > internal TMR1 > internal TMR2 > internal TMR3
- A/D converter
 - 8-bit resolution and 8 inputs
- General-purpose ports
 - Input ports: 12
 - Output ports : 4
 - I/O ports: 62 (These pins can be switched between input and output in 1-bit units.)
- PLL block
 - Includes a sub-charge pump for high-speed locking.
 - Supports dead zone control.
 - Built-in unlock detection circuit.
 - Twelve reference frequencies: 1, 3, 3.125, 5, 6.25, 9, 10, 12.5, 25, 30, 50, and 100 kHz.
 - A second PLL circuit is also included for use in AM up conversion.
- Universal counter
 - This 20-bit counter can be used for either frequency or period measurement and supports four measurement (calculation) periods: 1, 4, 8, and 32 ms.
- Timers
 - Two fixed timers and two programmable timers (8-bit counters)
 - TMR0: Supports four periods: 10 μ s, 100 μ s, 1 ms, and 5 ms
 - TMR1: Supports four periods: 10 μ s, 100 μ s, 1 ms, and 10 ms
 - TMR2 and TMR3: Programmable 8-bit counters. Input clocks with 10 μ s, 100 μ s, and 1 ms periods are provided.
 - One 125-ms timer flip-flop provided.
- Beep circuit
 - Provides 12 fixed beep tones: 0.5, 1, 2, 2.08, 2.2, 2.5, 3.33, 3.75, 4.17, and 7.03 kHz.
 - Programmable 8-bit beep tone generator. Reference clocks with frequencies of 5 kHz, 15 kHz, and 50 kHz are provided.
- Reset
 - Built-in voltage detection reset circuit
 - External reset pin

- Cycle time
 - 1.33 μ s (All instructions are one word.)
- Halt mode
 - The microcontroller operating clock is stopped in halt mode.
 - There are four conditions that can clear halt mode: an interrupt request, a timer flip-flop overflow, a PA port input, or a HOLD pin input.
- Operating supply voltage
 - 4.5 to 5.5 V (Microcontroller block only: 3.5 to 5.5 V)
- Package
 - QIP100E
- OTP version
 - LC72P3700
- Development tools
 - Emulator :RE32N
 - Evaluation chip: LC72EV3700
 - Evaluation chip board: EB-72EV3700

Pin Descriptions

Pin No.	Symbol	I/O	Function	Equivalent circuit
32 31 30 29	PA0 PA1 PA2 PA3	I	Dedicated input ports. These ports are designed with a low threshold voltage. The pull-down resistors for all four pins are set up together with an IOS1 instruction. The pull-down resistors cannot be set individually. Input is disabled in backup mode.	<p>Programmable</p> <p>A10896</p>
28 27 26 25	PB0 PB1 PB2 PB3	I/O	General-purpose I/O ports The mode (input or output) is set using the IOS2 instruction. Input is disabled and the pins go to the high-impedance state in backup mode. These ports are set up as general-purpose input ports after a power on reset.	<p>A10897</p>
24 23 22 21	PC0 PC1 PC2 PC3	I/O	General-purpose I/O ports (high-voltage input and output) The mode (input or output) is set using the IOS2 instruction. External pull-up resistors are required since the output circuits are open drain circuits. Input is disabled and the pins go to the high-impedance state in backup mode. These ports are set up as general-purpose input ports after a power on reset.	<p>A10898</p>
20 19 18 17	PD0/INT4 PD1/INT5 PD2 PD3	I/O	General-purpose I/O and external interrupt shared function ports The input formats are Schmitt inputs. The external interrupt function is enabled when the external interrupt enable flag is set. • When used as general-purpose I/O ports: The mode (input or output) is set in 1-bit units using the IOS2 instruction. • When used as external interrupt pins: The external interrupt functions are enabled by setting the corresponding external interrupt enable flag (INT4EN or INT5EN). Here, the pins must be set to input mode in advance. Input is disabled and the pins go to the high-impedance state in backup mode. These ports are set up as general-purpose input ports after a power on reset.	<p>A10899</p>

Pin No.	Symbol	I/O	Function	Equivalent circuit
88	SNS	I	<p>Voltage sense and general-purpose input shared function port This input circuit is designed with a low input threshold voltage.</p> <ul style="list-style-type: none"> When used as a voltage sense input: This pin is used to test for power failures on the return from backup mode. Application can test this condition using the internal SNS flip-flop. The SNS flip-flop can be tested with the TST instruction. (This usage requires external components (capacitors and resistors). See the sample application circuit in the user's manual.) When used as a general-purpose input port: When used as a general-purpose input port the pin state can be tested with the TST instruction. <p>Unlike the other input ports, input to this pin is not disabled in backup mode and after a power on reset. As a result, through currents must be taken into account when designing applications that use this pin as a general-purpose input.</p>	 <p>A10906</p>
87	HOLD	I	<p>Power supply monitor (with interrupt function) This pin is designed with a high input threshold voltage.</p> <p>This pin is normally connected to the ACC line and used for power off detection. When a power off state is detected, the HOLDON flag and the hold interrupt request flag will be set. To enter backup mode, execute a CKSTP instruction when the HOLD pin is low. Set this pin high to clear backup mode.</p>	 <p>A10907</p>
86	RESET	I	<p>System reset pin When the CPU is operating or in halt mode, the system is reset when this pin is held low for at least one machine cycle. Execution starts with the PC pointing to location 0. At this time the SNS flip-flop is set. A low level must be applied for at least 50 ms when power is first applied.</p>	 <p>A10908</p>
85 84 83 82 81 80 79 78	PH0/ADI0 PH1/ADI1 PH2/ADI2 PH3/ADI3 PI0/ADI4 PI1/ADI5 PI2/ADI6 PI3/ADI7	I	<p>General-purpose input and A/D converter input shared function ports The IOS1 instruction is used to switch between the general-purpose input and the A/D converter input functions.</p> <ul style="list-style-type: none"> When used as a general-purpose input ports: The general-purpose input port function is set up with the IOS1 instruction. (In bit units) When used as A/D converter input pins: The A/D converter input port function is set up with the IOS1 instruction. (In bit units) <p>The pin whose voltage is to be converted is specified with the IOS1 instruction, and the conversion is started with the UCC instruction.</p> <p>Note: Since input is disabled for ports specified for the ADI function, executing an input instruction for such a port will always return a low level. Input is disabled in backup mode. These ports are set up as general-purpose input ports after a power on reset.</p>	 <p>A10909</p>
76 75 74 73	PJ0 PJ1 PJ2 PJ3	O	<p>General-purpose output ports Since these are open-drain output circuits, external pull-up resistors are required. The internal transistors are turned off (resulting in a high-level output) in backup mode and after a power on reset.</p>	 <p>A10910</p>
72 71 70 69	PK0/INT0 PK1/INT1 PK2/INT2 PK3/INT3	I/O	<p>General-purpose I/O and external interrupt shared function ports The input formats are Schmitt inputs. The external interrupt function is enabled when the external interrupt enable flag is set.</p> <ul style="list-style-type: none"> When used as general-purpose I/O ports: The mode (input or output) is set in 1-bit units using the IOS1 instruction. When used as external interrupt pins: The external interrupt functions are enabled by setting the corresponding external interrupt enable flag (INT0EN through INT3EN). Here, the pins must be set to input mode in advance. <p>Input is disabled and the pins go to the high-impedance state in backup mode. These ports are set up as general-purpose input ports after a power on reset.</p>	 <p>A10911</p>

Pin No.	Symbol	I/O	Function	Equivalent circuit
68 to 61	PL0 to 3 PN0 to 3	I/O	General-purpose I/O ports The mode is switched between input and output with the IOS instruction. Input is disabled and the pins go to the high-impedance state in backup mode. These ports are set up as general-purpose input ports after a power on reset.	
60 59 58 57	PN0/BEEP PN1 PN2 PN3	I/O	General-purpose I/O port and beep tone output shared function ports The IOS2 instruction is used to switch between the general-purpose I/O port and the beep tone output functions. <ul style="list-style-type: none"> When used as a general-purpose input ports: The general-purpose I/O port function is set up with the IOS2 instruction. (Pins PN1 through PN3 are general-purpose I/O pins.) When used as the beep tone output pin: The beep tone output function is set up with the IOS2 instruction. The frequency is set with the BEEP instruction. When this pin is used as the beep tone output pin, executing an output instruction for this pin only sets the internal latch and has no influence on the output. Input is disabled and the pins go to the high-impedance state in backup mode. These ports are set up as general-purpose input ports after a power on reset. 	<p>A10912</p>
56 to 49	P00 to 3 PP0 to 3	I/O	General-purpose I/O ports The mode is switched between input and output with the IOS instruction. Input is disabled and the pins go to the high-impedance state in backup mode. These ports are set up as general-purpose input ports after a power on reset.	
48 to 41 38 to 33	PQ0 to 3 PR0 to 3 PS0 to 3 PT0 to 1	I/O	General-purpose I/O ports The mode is switched between input and output with the IOS instruction, and data is input with the INR instruction and output with the OUTR instruction. The SPB, RPB, TPT, and TPF instruction cannot be used with these ports. Input is disabled and the pins go to the high-impedance state in backup mode. These ports are set up as general-purpose input ports after a power on reset.	<p>A10913</p>
99 2	TEST1 TEST2		IC test pins These pins must be tied to ground.	

LC723700 Instruction Set

Abbreviations

- ADDR: Program memory address
- b: Borrow
- c: Carry
- DH: Data memory address High (Row address) [2 bits]
- DL: Data memory address Low(Column address) [4 bits]
- I: Immediate data [4 bits]
- M: Data memory address
- N: Bit position [4 bits]
- M_{ADR}: M specified by address register
- ROM_{ADR}: Program memory data specified by address register
- P1n, P2n: Port number [4 bits]
- PW1n, PW2n: Port control word number [4 bits]
- PEn: Peripheral register number [4 bits]
- SR: ADR/DTR
- ADR: Address register
- DTR: Data register
- r: General register (One of the address from 00H to 0FH of BANK0)
- SWR: Status write register
- SRR: Status read register
- (), []: Contents of register or memory
- M(DH, DL): Data memory specified by DH, DL
