Note 1: If the device is powered up below -20°C and then the ambient temperature rises 105°C during normal operation, the output will be interrupted for approximately 2-3 ms. A correction is in process an will be available Q1 2007.

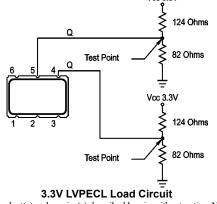

Note 2: Contact factory for exact frequency availability over 945 MHz

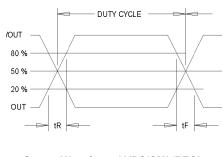

Note 3: Stability is inclusive of initial tolerance, deviation over temperature, shock, vibration, supply voltage, and aging for

one year at 50°C mean ambient temperature. Note 4: See Load Circuit Diagram in this Datasheet. Consult factory with nonstandard output load requirements. Vcc 3.3V
