M35048-XXXFP

SCREEN CHARACTER and PATTERN DISPLAY CONTROLLERS

DESCRIPTION

The M35048-XXXFP is a character pattern display control IC can display on the TV display. It can display 2 pages (24 characters × 12 lines per 1 page) at the same time. It uses a silicon gate CMOS process and it housed in a 20-pin shrink SOP package.
For M35048-001FP that is a standard ROM version of M35048-XXXFP respectively, the character pattern is also mentioned.

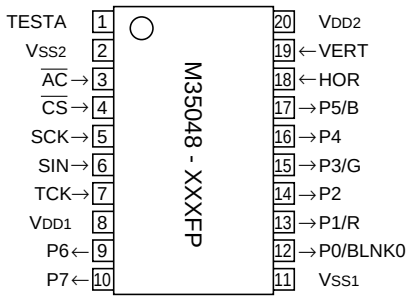
FEATURES

- Screen composition ..... 24 characters × 12 lines × 2 pages
- Number of characters displayed ..... 288 (Max.) × 2 pages
- Character composition ..... 12 × 18 dot matrix
- Characters available ..... page 0 : 256 characters
  page 1 : 128 characters
- Character sizes available ..... 4 (vertical) × 2 (horizontal)
- Display locations available
  Horizontal direction ..... 472 locations
  Vertical direction ..... 255 locations
- Blinking ..... Character units
  Cycle : division of vertical synchronization signal into 32 or 64
  Duty : 25%, 50%, or 75%
- Data input ..... By the 16-bit serial input function
- Coloring
  Character color ..... Character unit
  Background coloring ..... Character unit
  Border (shadow) coloring ..... 8 colors (RGB output)
  Specified by register
  Raster coloring ..... 8 colors (RGB output)
  Specified by register
- Blanking
  Character size blanking
  Border size blanking
  Matrix-outline blanking
  All blanking (all raster area)
- Output ports
  4 shared output ports (toggled between RGB output)
  4 dedicated output ports
- Display RAM erase function
- Display input frequency range ..... F_{OSC} = 6.3 MHz to 16.0 MHz
  (External input clock)
- Horizontal synchronous input frequency
  ..... H.sync = 15 .0 kHz to 32.0 kHz
- Display oscillation stop function

APPLICATION

Movie, Digital steel camera

PIN CONFIGURATION (TOP VIEW)



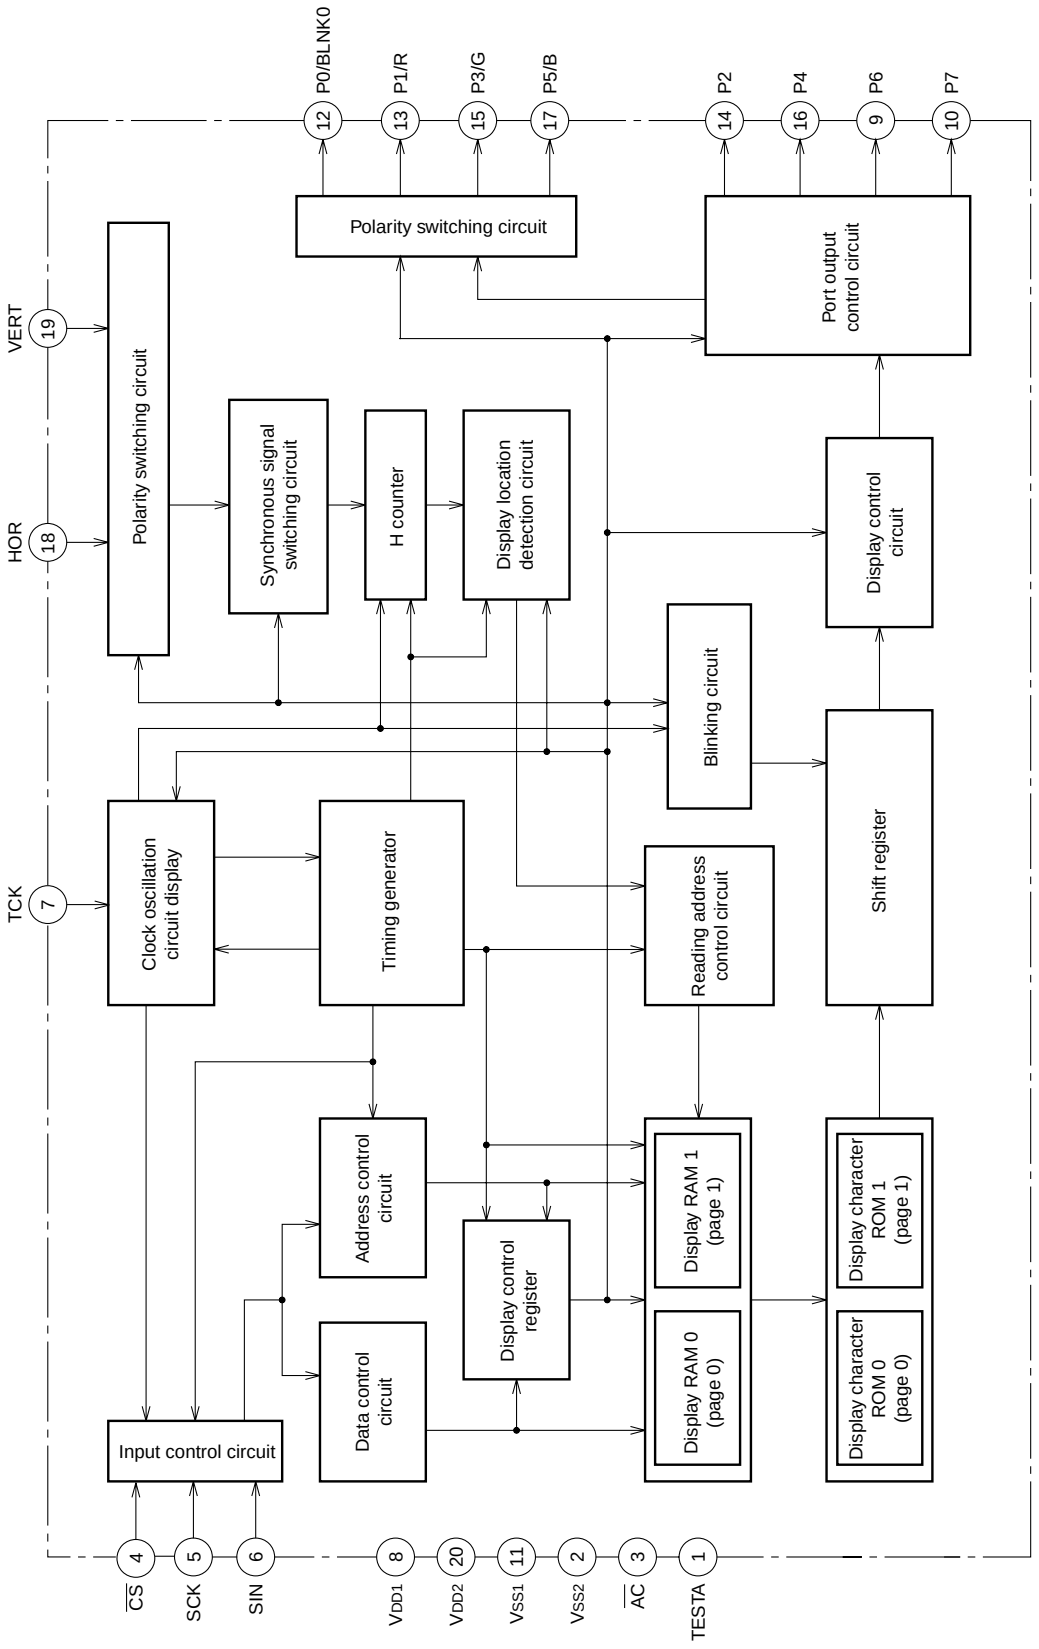
Outline 20P2Q-A

MITSUBISHI ELECTRIC

PIN DESCRIPTION

Pin Number	Symbol	Pin name	Input/ Output	Function
1	TESTA	TEST pin	–	Test pin. Open this pin.
2	V_{SS2}	Earthing pin	–	Connect to GND.
3	$\overline{AC}$	Auto-clear input	Input	When “L”, this pin resets the internal IC circuit. Hysteresis input. Built-in pull-up resistor.
4	$\overline{CS}$	Chip select input	Input	Chip select pin. Set this pin to "L" level at serial data transfer. Hysteresis input. Built-in pull-up resistor.
5	SCK	Serial data input	Input	SIN pin serial data is taken in when SCK rises at $\overline{CS}$ pin "L" level. Hysteresis input. Built-in pull-up resistor.
6	SIN	Serial data input	Input	This is the pin for serial input of display control register and display RAM data. Hysteresis input. Built-in pull-up resistor.
7	TCK	External clock	Input	This is the pin for external clock input.
8	V_{DD1}	Power pin	–	Please connect to +3V with the power pin.
9	P6	Port P6 output	Output	This is the output port.
10	P7	Port P7 output	Output	This is the output port.
11	V_{SS1}	Earthing pin	–	Please connect to GND using circuit earthing pin.
12	P0/BLNK0	Port P0 output	Output	This pin can be toggled between port pin output and BLNK0 signal output.
13	P1/R	Port P1 output	Output	This pin can be toggled between port pin output and R signal output.
14	P2	Port P2 output	Output	This is the output port.
15	P3/G	Port P3 output	Output	This pin can be toggled between port pin output and G signal output.
16	P4	Port P4 output	Output	This is the output port.
17	P5/B	Port P5 output	Output	This pin can be toggled between port pin output and B signal output.
18	HOR	Horizontal synchronous signal input	Input	This pin inputs the horizontal synchronous signal. Hysteresis input.
19	VERT	Vertical synchronous signal input	Input	This pin inputs the vertical synchronous signal. Hysteresis input.
20	V_{DD2}	Power pin	–	Please connect to + 3V with the power pin.

BLOCK DIAGRAM



MEMORY CONSTITUTION

Address 000_{16} to $11F_{16}$ are assigned to the display RAM, address 120_{16} to 128_{16} are assigned to the display control registers. The internal circuit is reset and all display control registers (address 120_{16} to 128_{16}) are set to "0" when the $\overline{AC}$ pin level is "L". And then, RAM is not erased and be undefinited. This memory is consisted of 2 pages : page 0 memory and page 1 memory (their addresses are common), page controlled by DAF bit of each address when writing data. For detail, see "DATA INPUT EXAMPLE". Memory constitution is shown in Figure 1 and 2.

Fig. 2 Memory constitution (page 1 memory)

Note: Page 0 and page 1 registers are found in their respective pages. For example, HP8 to HP0 of the page 0 memory sets the horizontal display start position of page 0, whereas HP8 to HP0 (same register name) of the page 1 memory sets the horizontal display start position of page 1. Also, registers common to both page 0 and page 1 are found only in the page 0 memory. For example, PTC0 is the control register of the P0 pin and is found only in the page 0 memory.

SCREEN CONSTITUTION

The screen lines and rows are determined from each address of the display RAM (page 0 and page 1 are common). The screen constitution is shown in Figure 3.

Row / Line	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24

Notes 1. The display RAM is undefined state at the $\overline{AC}$ pin.
2. The display RAM consists of 2 pages, page 0 and page 1 (common address). The page in which data is written is controlled by the DAF bit. When set to "0", data is written into page 0, whereas when set to "1", data is written into page 1.
3. Set to "1" when only setting blank code "FF_{16}" to character code.

REGISTERS DESCRIPTION

(1) Address 120_{16}

DA	Register	Contents		Remarks
		Status	Function	
0	TEST14 (Note 3)	⓪	It should be fixed to “0”.

C	TEST26 (Note 3)	⓪	Can not be used.	
		1	It should be fixed to “0”.	
D	VJT	⓪	It is used to "0", normally.	
		1	Alleviates continuous vertical jitters.	
E	TEST27 (Note 3)	⓪	Can not be used.	
		1	It should be fixed to “0”.	

Notes 1. The mark ◯ around the status value means the reset status by the "L" level is input to $\overline{AC}$ pin.
2. The page in which data is written is controlled by the DAF bit. When set to "0", data is written into page 0, whereas when set to "1", data is written into page 1.
3. Registers marked with (Note 3) are found only in page 0, therefore the register value does not change when the DAF bit is set to "1".

(Note 3)</td><td>(0)</td><td rowspan="2">For setting, see MODE0 (address 127_{16}).</td><td rowspan="2">Sets the display mode for when 2 pages are displayed at the same time.</td></tr>
<tr><td>1</td></tr>
</table>

Notes 1. The mark ◯ around the status value means the reset status by the "L" level is input to $\overline{AC}$ pin.
2. The page in which data is written is controlled by the DAF bit. When set to "0", data is written into page 0, whereas when set to "1", data is written into page 1.
3. Registers marked with (Note 3) are found only in page 0, therefore the register value does not change when the DAF bit is set to "1".

DISPLAY FORM 1

M35048-XXXFP has the following four display forms.

(1) Blanking mode

Character size
: Blanking same as the character size.

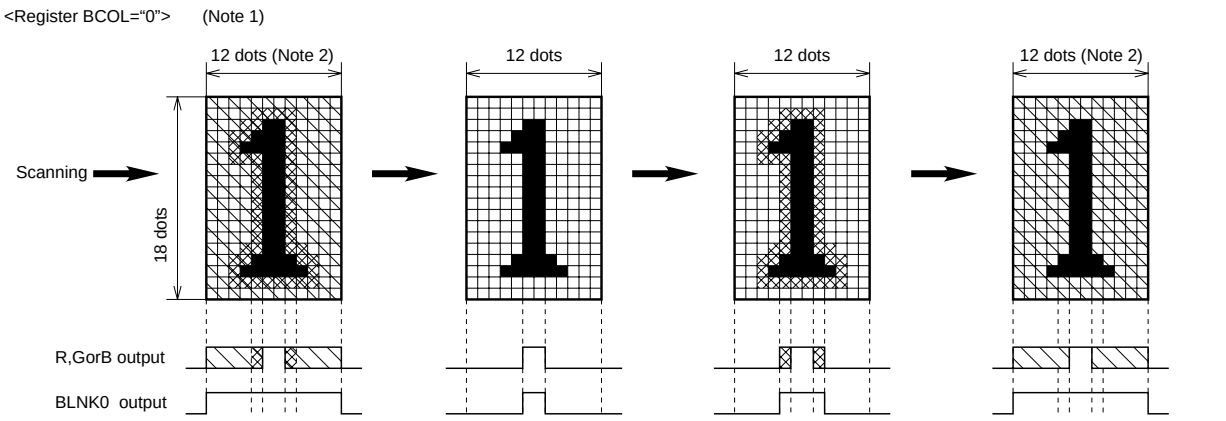
Border size
: Blanking the background as a size from character.

Matrix-outline size
: Blanking the background 12 ×18 dot.

All blanking size
: When set register BCOL to "1", all raster area is blanking.

The display mode and blanking mode can be set line-by-line, as follows, from registers BCOL, BLK1, BLK0 (address 128_{16}), DSP0 to DSP11 (address 124_{16}).

BCOL	BLK1	BLK0	Line of DSPn = "0"		Line of DSPn = "1"	
			Display mode	Blanking mode	Display mode	Blanking mode
0	0	0	All matrix-outline border display	All matrix-outline size	All matrix-outline display	All matrix-outline size
	0	1	Character display	Character size	Border display	Border size
	1	0	Border display	Border size	All matrix-outline display	All matrix-outlinesize
	1	1	All matrix-outline display	All matrix-outline size	Character display	Character size
1	0	0	All matrix-outline border display	All blanking size	All matrix-outline display	All blanking size
	0	1	Character display		Border display	
	1	0	Border display		All matrix-outline display	
	1	1	All matrix-outline display		Character display	



Note 1. When register BCOL is set to "1", the raster range of the display modes set respectively by BLK1 and BLK0 are colored by registers RR, RG, and RB (address 127_{16}). And the blanking mode is set all blanking size (all raster size) regardless of the BLK1 and BLK0 settings.
Note 2. The horizontal size of the full matrix-outline size can be set to 14 dots by register BETA14 (address 127_{16}). BLNK0 can also be output at 14 dots.

Fig. 4 Display form

(2) Shadow display

When border display mode, if set SYAD (address 128_{16}) = “0” to “1”, it change to shadow display mode.
Border and shadow display are shown below.
Set shadow display color by BR, BG or BB of display RAM or by register FR, FG and FB (address 127_{16}).

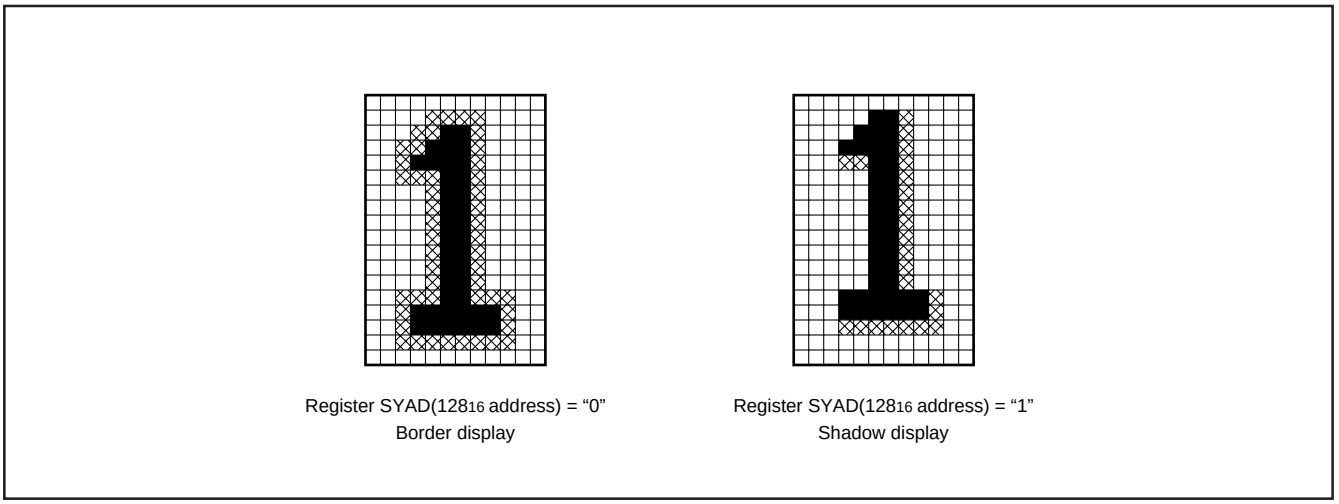


Fig. 5 Border and shadow display

DISPLAY FORM 2

This IC can display both page 0 and page 1 at the same time.
Page 0: Set the DAF bit in each addresses to "0".
Page 1: Set the DAF bit in each addresses to "1".

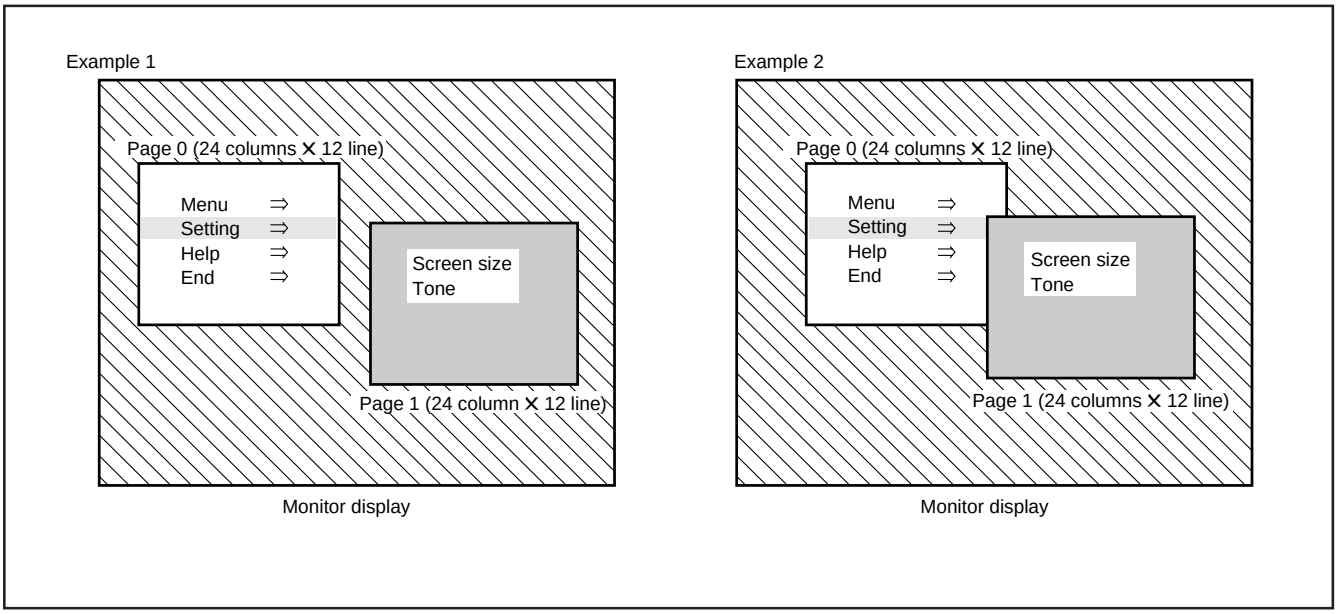

Fig.6 Example of 2 pages display

Example 1: Display position, display size, color, etc., can be freely set for each page, and the 2 pages can be displayed on top of each other or side-by-side.

Example 2: When the display range of the 2 pages overlap on the monitor screen, they can be displayed in the 5 below ways using registers MODE0 (address 127_{16}), MODE1 (address 128_{16}) and POPUP (address 126_{16}). (The POPUP register is effective only when MODE0 = "0" and MODE1 = "0".)

MODE1	MODE0	POPUP	Display mode
0	0	0	Standard (Page 1 priority)
		1	Standard (Page 0 priority)
0	1	—	AND
1	0	—	EXOR
1	1	—	OR

(1) Standard (page 1 priority) … Page 1 has priority in overlapping areas. Page 0 is not displayed in those areas.
(2) Standard (page 0 priority) … Page 0 has priority in overlapping areas. Page 1 is not displayed in those areas.
(3) AND ..... In overlapping areas, the RGB output of the 2 pages is AND processed and output.
(4) EXOR ..... In overlapping areas, the RGB output of the 2 pages is EXOR processed and output.
(5) OR ..... In overlapping areas, the RGB output of the 2 pages is OR processed and output.

CHARACTER FONT

Images are composed on a 12 × 18 dot matrix, and characters can be linked vertically and horizontally with other characters to allow the display the continuous symbols.
Character code FF_{16} is fixed as a blank without background. Therefore, cannot register a character font in this code.

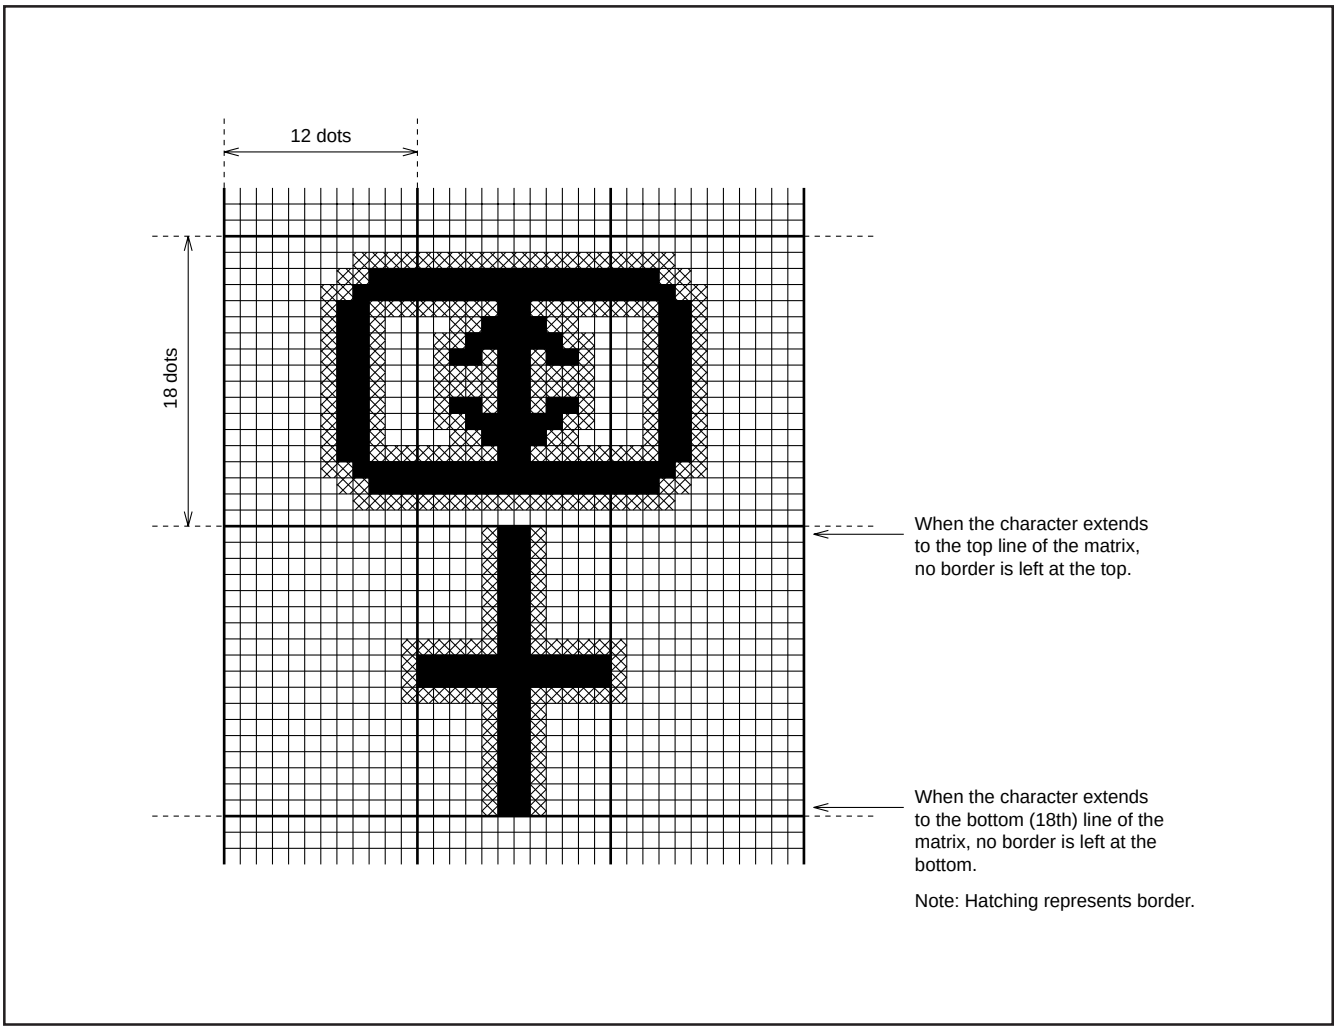

Fig.7 Example of border display

DATA INPUT EXAMPLE

Data of display RAM and display control registers can be set by the 16-bit serial input function. Example of data setting is shown in Figure 8.

Data input example (M35048-XXXFP)

Notes 1 : The page in which data is written is controlled by the address. To write data into page 0, set "0". To write data into page 1, set "1".
2 : Matrix-outline display in this data.
3 : Input a continuous clock of constant period from the TCK pin.

Fig 8. Example of data setting

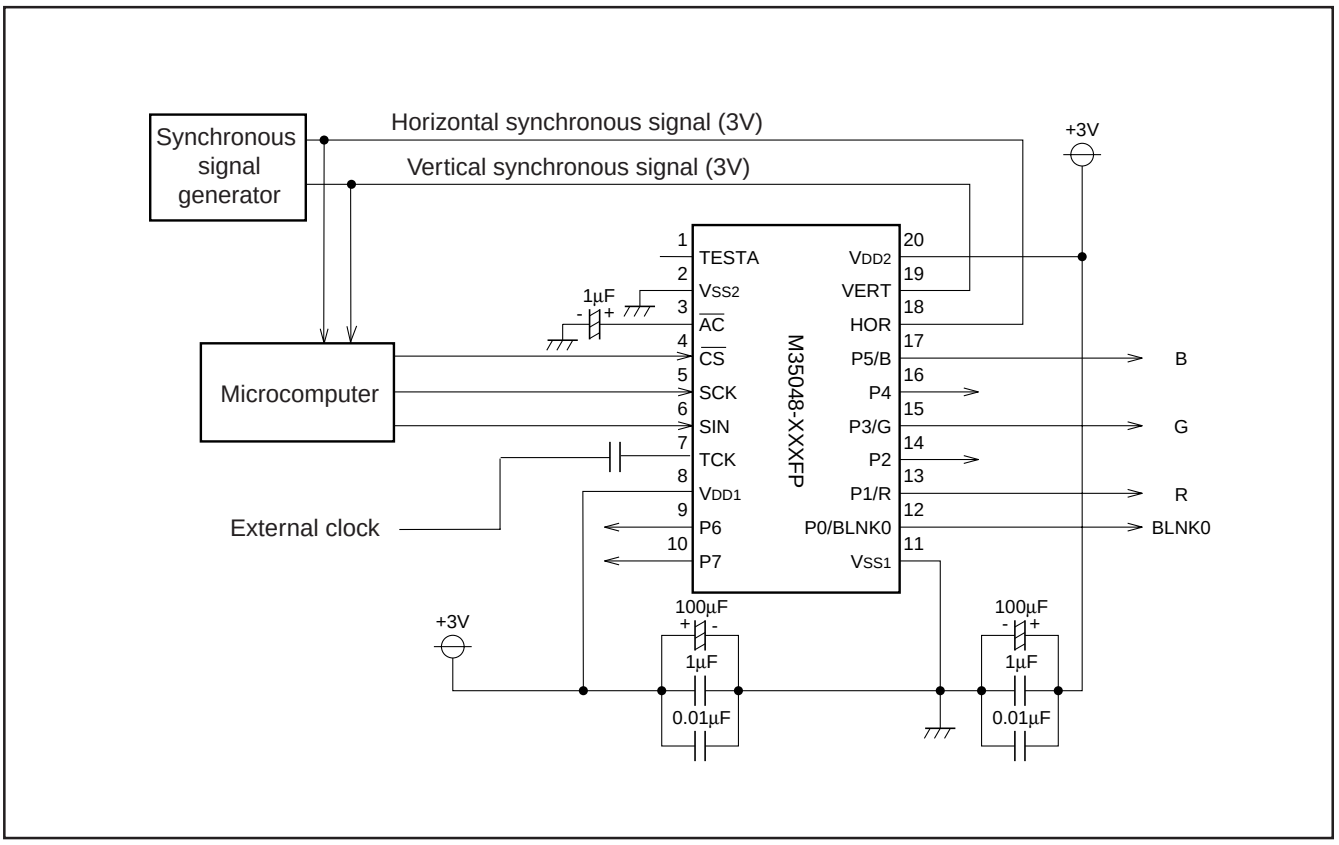

Fig. 9 Example of the M35048-XXXFP peripheral circuit

SERIAL DATA INPUT TIMING

(1)Serial data should be input with the LSB first.
(2)The address consists of 16 bits.
(3)The data consists of 16 bits.
(4)The 16 bits in the SCK after the $\overline{CS}$ signal has fallen are the address, and for succeeding input data, the address is incremented every 16 bits. Therefore, it is not necessary to input the address from the second data.

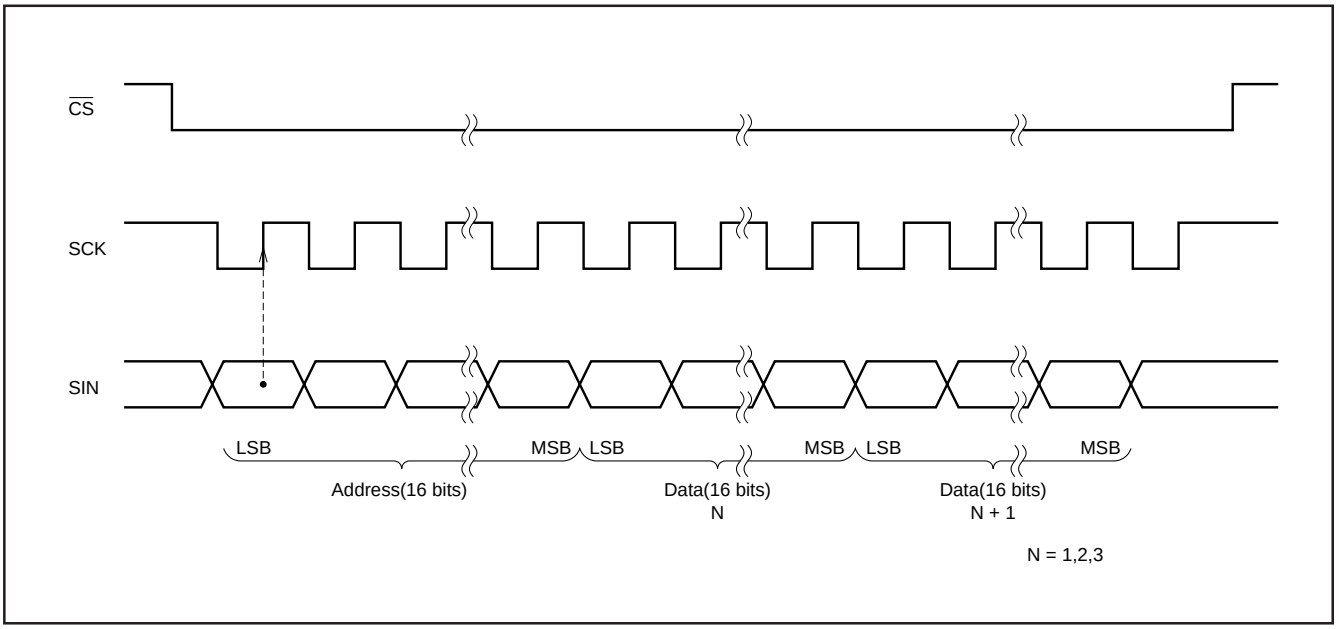

Fig.10 Serial input timing

TIMING REQUIREMENTS (Ta = –20°C to + 85°C, V_{DD} = 2.2 to 3.5V, unless otherwise noted)

Data input

Symbol	Parameter	Limits			Unit	Remarks
		Min.	Typ.	Max.		
$t_{w(SCK)}$	SCK width	200	—	—	ns	See Figure 11
$t_{su(\overline{CS})}$	$\overline{CS}$ setup time	200	—	—	ns	
$t_{h(\overline{CS})}$	$\overline{CS}$ hold time	2	—	—	µs	
$t_{su(SIN)}$	SIN setup time	200	—	—	ns	
$t_{h(SIN)}$	SIN hold time	200	—	—	ns	
t_{word}	1 word writing time	10	—	—	µs	

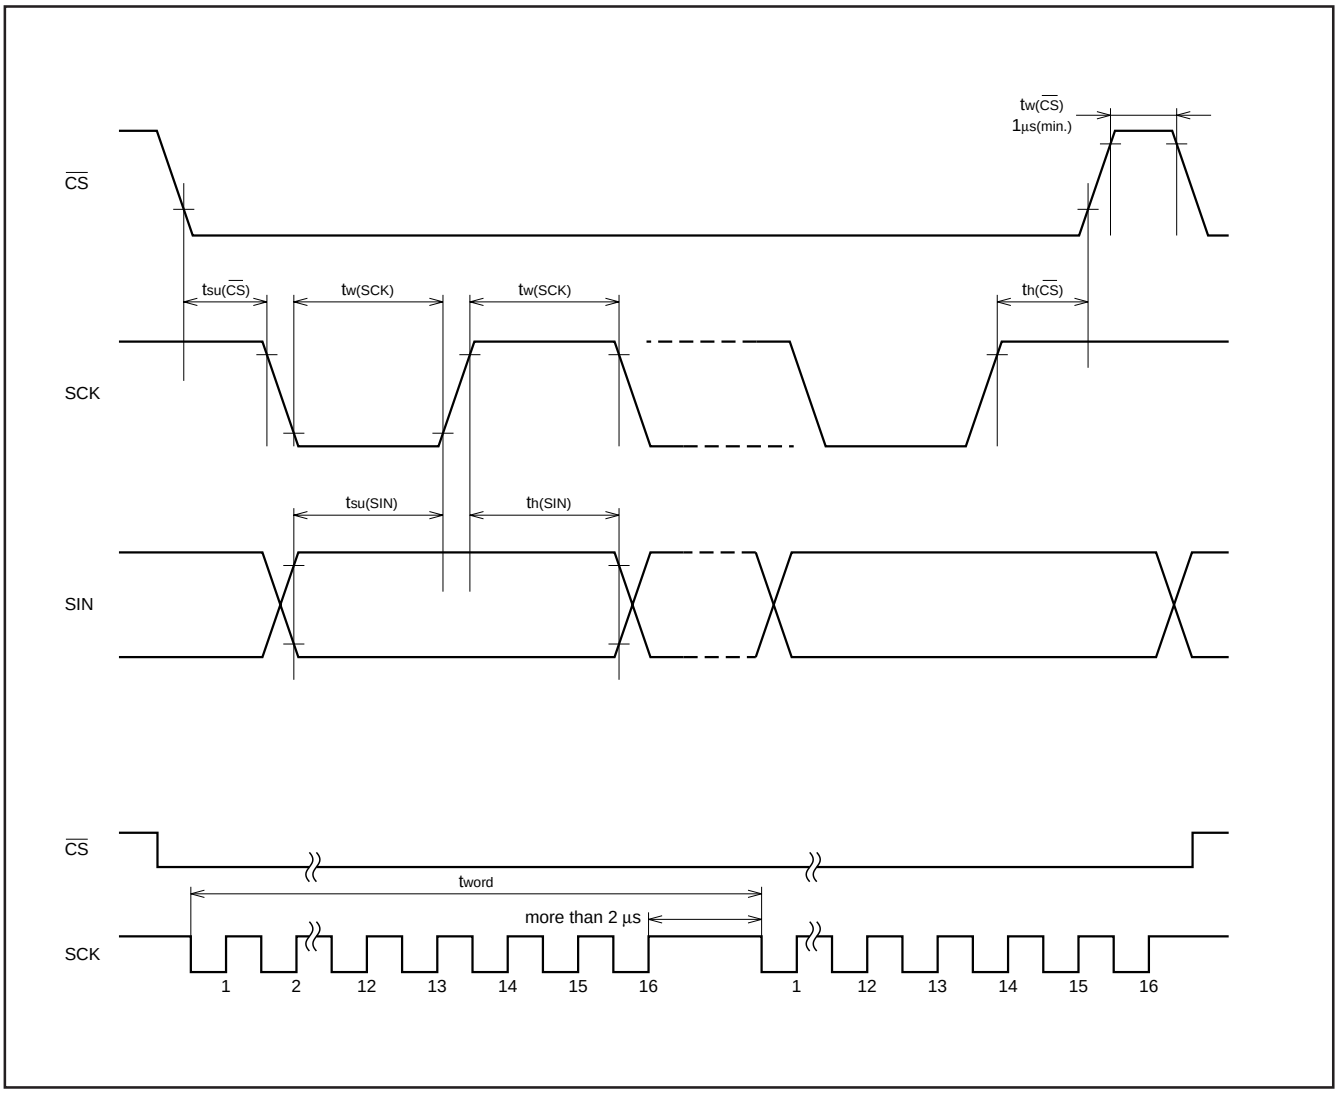

Fig. 11 Serial input timing requirements

ABSOLUTE MAXIMUM RATINGS

Symbol	Parameter	Conditions	Ratings	Unit
V_{DD}	Supply voltage	With respect to V_{SS}.	–0.3 to +4.0	V
V_I	Input voltage		V_{SS} –0.3 V_I V_{DD} +0.3	V
V_O	Output voltage		V_{SS} V_O V_{DD}	V
P_d	Power dissipation	Ta = +25°C	+300	mW
T_{opr}	Operating temperature		–20 to +85	°C
T_{stg}	Storage temperature		–40 to +125	°C

RECOMMENDED OPERATING CONDITIONS (V_{DD} = 3.00V, Ta = –20 to +85°C, unless otherwise noted)

Symbol	Parameter		Limits			Unit
			Min.	Typ.	Max.	
V_{DD}	Supply voltage		2.20	3.00	3.50	V
V_{IH}	"H" level input voltage	$\overline{AC}$,$\overline{CS}$,HOR,SIN,SCK,VERT	0.8V_{DD}	V_{DD}	V_{DD}	V
V_{IL}	"L" level input voltage	$\overline{AC}$,$\overline{CS}$,HOR,SIN,SCK,VERT	0	0	0.2V_{DD}	V
F_{OSC}	Oscillating frequency for display		6.3	—	16.0	MHz
H.sync	Horizontal synchronous signal input frequeney		15.0	—	32.0	kHz

ELECTRICAL CHARACTERISTICS (V_{DD} = 3.00V, Ta = 25°C, unless otherwise noted)

Symbol	Parameter	Test conditions	Limits			Unit
			Min.	Typ.	Max.	
V_{DD}	Supply voltage	Ta = –20 to +85°C	2.20	3.00	3.50	V
I_{DD}	Supply current	V_{DD} = 3.00V	—	5	10	mA
V_{OH}	"H" level output voltage P0 to P7 (Note1)	V_{DD} = 2.20V, I_{OH} = -0.1mA	1.80	—	—	V
V_{OL}	"L" level output voltage P0 to P7 (Note2)	V_{DD} = 2.20V, I_{OH} = 0.1mA	—	—	0.4	V
R_I	Pull-up resistance $\overline{AC}$	V_{DD} = 3.00V	30	—	150	k
V_{TCK}	External clock input width	2.20V V_{DD} 3.50V	0.7V_{DD}	—	V_{DD}	V

Notes 1. The current from the IC must not exceed – 0.1 mA/port at any of the port pins (P0 to P7).
2. The current flowing into the IC must not exceed 0.1 mA/port at any of port pins (P0 to P7).

NOTE FOR SUPPLYING POWER

(1)Timing of power supplying to $\overline{AC}$ pin

The internal circuit of M35048-XXXFP is reset when the level of the auto clear input pin $\overline{AC}$ is "L". This pin in hysteresis input with the pull-up resistor.

The timing about power supplying of $\overline{AC}$ pin is shown in Figure 12.

After supplying the power (V_{DD} and V_{SS}) to M35048-XXXFP and the supply voltage becomes more than 0.8 × V_{DD}, it needs to keep V_{IL} time; tw of the $\overline{AC}$ pin for more than 1ms.

Start inputting from microcomputer after $\overline{AC}$ pin supply voltage becomes more than 0.8 × V_{DD} and keeping 200ms wait time.

(2)Timing of power supplying to V_{DD1} and V_{DD2}.

Supply power to V_{DD1} and V_{DD2} at the same time.

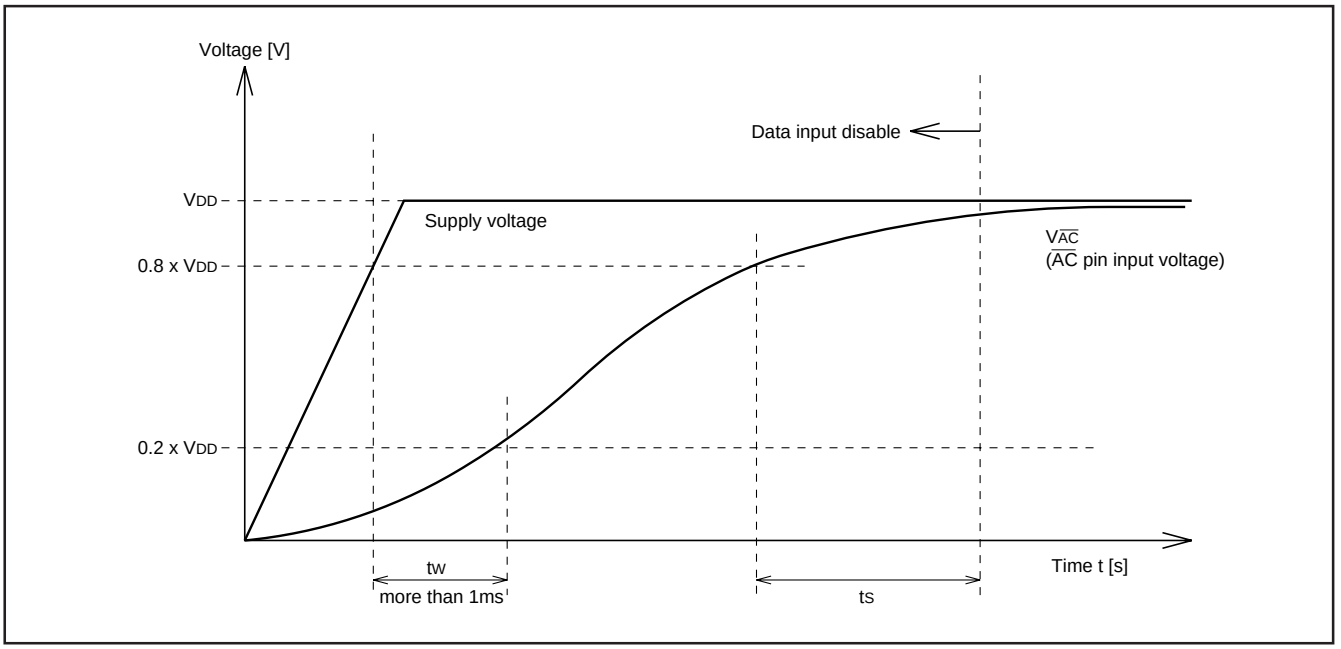

Fig. 12 Timing of power supplying to $\overline{AC}$ pin

PRECAUTION FOR USE

Notes on noise and latch-up

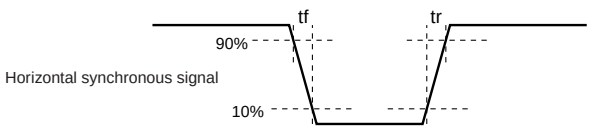
In order to avoid noise and latch-up, connect a bypass capacitor (0.1µF) directly between the V_{DD1} pin and V_{SS1} pin, and the V_{DD2} pin and V_{SS2} pin using a heavy wire.

Note for horizontal synchronous signal input to the HOR pin

Set horizontal synchronous signal edge* waveform timing to under 5ns and input to HOR pin.

Set only the side which set by B/$\overline{F}$ register waveform timing under 5ns and input to HOR pin.

*: Set front porch edge or back porch edge by B/$\overline{F}$ register (address 12816).



Note for external clock input to the TCK pin

Input to the TCK pin a constant-period continuous external clock that synchronizes with the horizontal synchronous signal. Never stop inputting the clock while displaying.

DATA REQUIRED FOR MASK ROM ORDERING

Please send the following data for mask orders.

(1) M35048-XXXFP mask ROM order confirmation form
(2) 20P2Q-A mask specification from
(3) ROM data : EPROMs or floppy disks
    *In the cace of EPROMs, three sets of EPROMs are required per pattern.
    *In the cace of floppy disks, 3.5-inch 2HD disk (IBM format) is required per pattern.

STANDARD ROM TYPE : M35048-001FP

M35048-001FP is a standard ROM type of M35048-XXXFP. The character patterns for 0 page are fixed to the contents of Figure 13 to 16, the character patterns for page 1 are fixed to the contents of Figure 17 and 18.

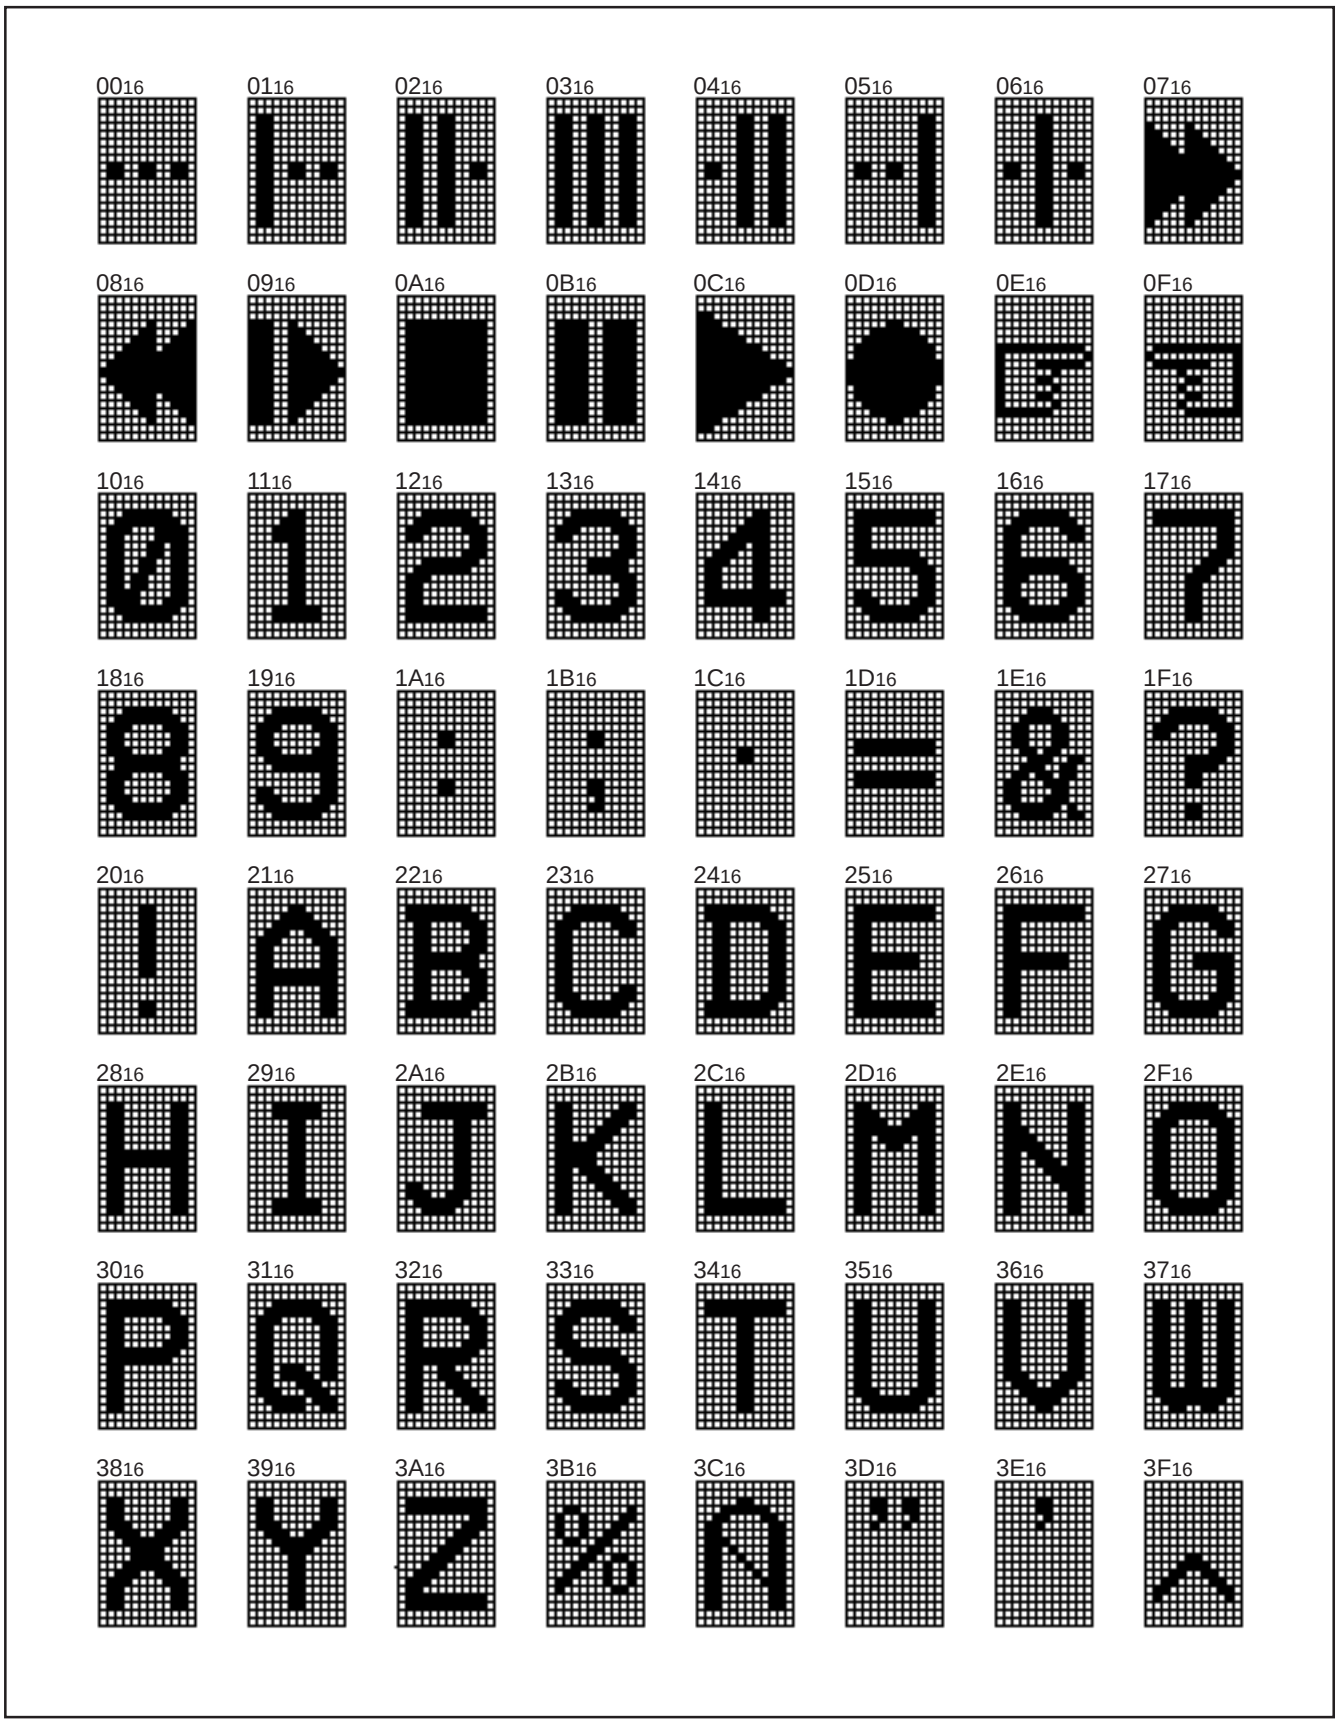


Fig. 13 M35048-001FP character pattern for page 0 (1)

Note : Please fill in all items marked ✵, ☐.

✵	Customer	Company name	TEL ( )	Issuance signature	Subumitted by	Supervisor
		Data issued	Date :			

✵ 1. Confirmation
Confirm the Character Font Preparation Program in Mitsubishi Sales Sites.
Three EPROMs are required for each pattern if this order is performed by EPROMs.
One floppy disk is required for each pattern if this order is performed by a floppy disk.

☐ Ordering by EPROMs
If at least two of the three sets of EPROMs submitted contain identical data, we will produce masks based on this data. We shall assume the responsibility for errors only if the mask ROM data on the products we produce differs from this data. Thus, extreme care must be taken to verify the data in the submitted EPROMs (27512 type used).

(1) The font data prepared by the Character Font Preparation Program is saved as a binary type object file (addresses 0000h to FFFFh) and a hex type object file . Three sets of these EPROMs are required.
(2) Attach the erase protect seals on three EPROMs. Each seal bears the type name (M35048), and ROM No. (–...FP).

Checksum code for entire EPROM ☐☐☐☐ (hexadecimal notation)

Save file name M 0 4 8 R ☐☐☐ . V ☐☐ (equal or less than eight characters)

☐ Ordering by floppy disk
We will produce masks based on the mask files generated by the mask file generating utility. We shall assume the responsibility for errors only if the mask ROM data on the products we produce differs from this mask file. Thus, extreme care must be taken to verify the mask file in the submitted floppy disk.
The mask files forms hex-file made by the character font preparation program in the mask file generation utility. Submit the mask file after be saved in the floppy disk.
The submitted floppy disk must be 3.5-inch 2HD type and DOS/V format. And the number of the mask files must be one in one floppy disk.

File code ☐☐☐☐☐☐☐☐ (hexadecimal notation)

Mask file name ☐☐☐☐☐☐☐☐ .MSK (equal or less than eight characters)

✵ 2. Select the marking type (Check ✔ in the appropriate box).
Special Mark ☐..... Fill in the Mark Specification Form (20P2Q-A) and attach to the Mask ROM Confirmation Form.
Standard Mark ☐..... No writing is required.

✵ 3. Select the package type (Check ✔ in the appropriate box).
☐..... SSOP (M35048-XXXFP)
