MAXIM

Low-Voltage, Dual DPDT/Quad SPDT Analog Switches in QFN

General Description

The MAX4699/MAX4701/MAX4702 are low-voltage, single-supply CMOS analog switches. The MAX4699/MAX4701 are dual double-pole/double-throw (DPDT) switches with two control inputs that control two single-pole/double-throw (SPDT) switches each. The MAX4702 is a quad SPDT switch with one control input and one low-voltage digital logic power supply.

These devices operate from a single +1.8V to +5.5V power supply. When powered from a +2.7V supply the MAX4699/MAX4701/MAX4702 offer a 75Ω on-resistance (R_{ON}), with 12Ω max R_{ON} flatness and 4Ω max matching between channels. Each switch has Rail-to-Rail® signal handling, fast switching speeds of t_{ON} = 35ns, t_{OFF} = 20ns, and a maximum 1nA of leakage current.

The MAX4699/MAX4701 digital inputs are 1.8V-logic compatible when operated from a +3V supply. The MAX4702's digital inputs feature a 1.0V threshold when powered with a 1.5V logic supply.

The MAX4699 is available in a space-saving 16-lead 4mm x 4mm QFN package. The MAX4701/MAX4702 are available in space-saving 16-lead 3mm x 3mm QFN and 16-pin TSSOP packages.

Applications

Audio and Video Signal Routing

Cellular Phones

Battery-Operated Equipment

Communications Circuits

Modems

Features

- **3mm x 3mm and 4mm x 4mm 16-Pin QFN Package**
- **Guaranteed On-Resistance:**
  75Ω (max) (+3V Supply)
  40Ω (max) (+5V Supply)
- **Guaranteed Match Between Channels:**
  4Ω max
- **Guaranteed Flatness Over Signal Range:**
  12Ω max
- **Low Leakage Currents Over Temperature:**
  1nA Max at +85°C
- **Fast Switching: t_{ON} = 35ns, t_{OFF} = 20ns**
- **Guaranteed Break-Before-Make**
- **Single-Supply Operation from +1.8V to +5.5V**
- **Rail-to-Rail Signal Handling**
- **-3dB Bandwidth: 250MHz**
- **Low Crosstalk: -79dB (1MHz)**
- **High Off-Isolation: -76dB (1MHz)**

Ordering Information

PART	TEMP. RANGE	PIN-PACKAGE
MAX4699EGE	-40°C to +85°C	16 QFN (4mm x 4mm)
MAX4701EUE	-40°C to +85°C	16 TSSOP
MAX4701EGE	-40°C to +85°C	16 QFN (3mm x 3mm)
MAX4702EUE	-40°C to +85°C	16 TSSOP
MAX4702EGE	-40°C to +85°C	16 QFN (3mm x 3mm)

Low-Voltage, Dual DPDT/Quad SPDT Analog Switches in QFN

ABSOLUTE MAXIMUM RATINGS

(Voltages Referenced to GND)
V+ .....-0.3V to +6V
V_L, IN_, COM_, NO_, NC_ (Note1)..... -0.3V to (V+ + 0.3V)
Continuous Current COM_, NO_, NC_ ..... ±20mA
Peak Current COM_, NO_, NC_ (pulsed at 1ms, 10% duty cycle).....±40mA
ESD per Method 3015.7.....>2.5kV

Continuous Power Dissipation (T_A = +70°C)
TSSOP (derate 5.6mW/°C above +70°C) 444mW
QFN (3 x 3) (derate 16.9mW/°C above +70°C) 1349mW
QFN (4 x 4) (derate 18.5mW/°C above +70°C) 1481mW
Operating Temperature Range ..... -40°C to +85°C
Storage Temperature Range ..... -65°C to +150°C
Lead Temperature (soldering, 10s) ..... +300°C

Note 1: Signals on IN_, COM_, NO_, and NC_ exceeding 0 or V+ are clamped by internal diodes. Limit forward-diode current to maximum current rating.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

ELECTRICAL CHARACTERISTICS—Single +3V Supply

(V+ = +2.7V to +3.3V, GND = 0, V_{IH} = +1.4V, V_{IL} = +0.5V, (V_L = +1.5V, V_{IH} = +1.0V, V_{IL} = +0.4V for MAX4702 only), T_A = -40°C to +85°C. Typical values are at V+ = +3V and T_A = +25°C, unless otherwise noted.) (Notes 2, 3)

		MAX4702 (V_L = +1.5V)				0.4	
Logic Input Current	I_{IH}, I_{IL}	V_{IN} = 0 to V+		-1		1	µA

Note 2: The algebraic convention, where the most negative value is a minimum and the most positive value a maximum, is used in this data sheet.
Note 3: -40°C specifications are guaranteed by design.
Note 4: $\Delta R_{ON} = R_{ON(MAX)} - R_{ON(MIN)}$.
Note 5: Flatness is defined as the difference between the maximum and minimum value of on-resistance as measured over the specified analog signal ranges.
Note 6: Guaranteed by design.
Note 7: Off-Isolation = 20log10 ($V_{COM\_}$ / V_{NO}), V_{COM} = output, V_{NO} = input to off switch.
Note 8: Between any two switches.

Detailed Description

The MAX4699/MAX4701 are low-voltage CMOS analog switches that operate from a single +1.8V to +5.5V power supply. The MAX4702 requires an additional logic supply that allows for setting lower logic thresholds. The MAX4699/MAX4701 are double-pole/double-throw (DPDT) devices. The MAX4702 is a quad single-pole/double-throw (SPDT) device. These devices feature a break-before-make switching, fast switching speeds (with V+ = 5V: t_{ON} = 18ns max, t_{OFF} = 9ns max and with V+ = 3V: t_{ON} = 35ns, t_{OFF} = 20) and rail-to-rail signal handling. A logic input on the MAX4702 allows for logic thresholds as low as 1.0V.

Applications Information

Analog Signal Levels

Analog signals that range over the entire supply voltage (V+ to GND) can be passed with very little change in on-resistance (see *Typical Operating Characteristics*). The switches are bidirectional, so the NO, NC, and COM pins can be used as either inputs or outputs.

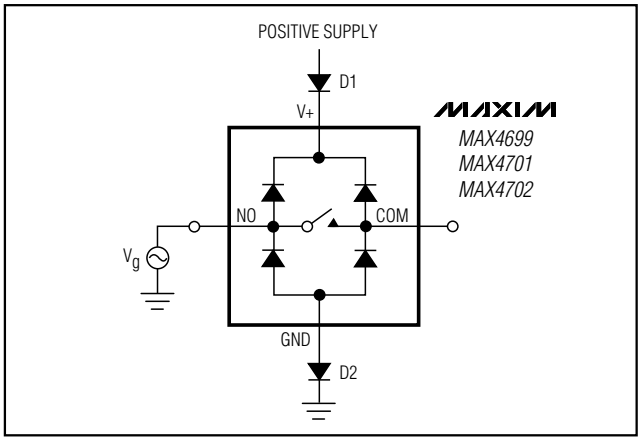

Figure 1. Overvoltage Protection Using Two External Blocking Diodes

Low-Voltage, Dual DPDT/Quad SPDT Analog Switches in QFN

Power-Supply Sequencing and Overvoltage Protection

Caution: Do not exceed the absolute maximum ratings because stresses beyond the listed ratings may cause permanent damage to the devices.

Proper power-supply sequencing is recommended for all CMOS devices. Always apply V+ before applying analog signals, especially if the analog signal is not current limited. If this sequencing is not possible, and if the analog inputs are not current limited to <20mA, add a small-signal diode (D1) as shown in Figure 1. If the analog signal can dip below GND, add D2. Adding protection diodes reduces the analog range to a diode drop (about 0.7V) below V+ (for D1), and a diode drop above ground (for D2). On-resistance increases slightly at low supply voltages. Maximum supply voltage (V+) must not exceed +6V.

Adding protection diode D2 causes the logic threshold to be shifted relative to GND. TTL compatibility is not guaranteed when D2 is added.

Protection diodes D1 and D2 also protect against some overvoltage situations. With Figure 1's circuit, if the supply voltage is below the absolute maximum rating, and if a fault voltage up to the absolute maximum rating is applied to an analog signal pin, no damage will result.

V_L Logic Input (MAX4702)

The MAX4702 features a V_L logic input that allows for lower logic input thresholds down to 1.0V min for V_{IH} in the quad SPDT configuration. Power-up V_L after V+ has been powered with a minimum of 1.5V to ensure proper operation of the device.
