

MCH Series

Military Grade High Voltage Chip Resistors

OhmCraft's revolutionary fine line, thick film technology, called **FineFilm**, provides an entirely new level of stability and voltage ratings in chip resistors. Our MCH series of resistors meets the same high standards as our HVC series, but with the added feature of an extended temperature range.

The usual hybrid technologies for manufacturing resistors depend upon composite materials that have limitations. Traditional thick-film methods severely limit performance characteristics and thin-film methods are limited in attainable ohmic values. The **FineFilm** method of manufacturing offers the best characteristics of both methods, plus adds many unique features. **FineFilm** resistors feature a longer, high-aspect ratio trace of lower resistivity film. The combination of long line, high-aspect ratio, and higher conductivity film, give **FineFilm**

- ◆ Voltage Ratings to 40,000 Volts
- ◆ Ohmic Values to 1,000 Gigohms
- ◆ Ultra High Stability
- ◆ Tight Tolerances (to 0.1%)
- ◆ Low TCR and VCR
- ◆ Very Low noise
- ◆ Extended Temperature Range
(-55°C to +125°C)
- ◆ Custom Configurations

resistors unmatched design efficiency, versatility, linearity, stability and low noise. The **FineFilm** method allows control of process parameters to very tight tolerances. The result is chip resistors with outstanding stability and high voltage ratings.

Using the same method, a complete line of **FineFilm** leaded resistors, dividers and networks are manufactured. For information on those products, please refer to the appropriate data sheets.

Maximum Continuous Voltage:

FineFilm high voltage chip resistors offer voltage ratings that are much higher than conventional screen printed resistors of the same size and resistive value.

Resistance value
expressed as a four
digit number where
the first three num-
bers are the signifi-
cant value, and the
forth number is the
number of zeros.

B = $\pm$ 0.1 %
C = $\pm$ 0.25 %
D = $\pm$ 0.5 %
F = $\pm$ 1.0 %
G = $\pm$ 2.0%
J = $\pm$ 5.0 %
K = $\pm$ 10 %
N = $\pm$ 15 %
L = $\pm$ 20 %
M = $\pm$ 30 %
P = $\pm$ 50 %

B = Solderable wrap-around

Note 1: TCR measured from -55° C to $+125^{\circ}$ C.

Note 2: Value is dependent on case size.

Note 3: Tolerance is dependent on case size & value.

Example: For a High Voltage, 125 Meg-ohm resistor with case size of 0805,
a TCR of $\pm$ 50 ppm/C, a $\pm$ 1% tolerance, and wrap-around solderable
terminations - the part number would be:
