MH64S64APFH-6,-6L,-7,-7L

4294967296-BIT (67108864 - WORD BY 64-BIT)SynchronousDRAM

DESCRIPTION

The MH64S64APFH is 67108864 - word by 64-bit Synchronous DRAM module. This consists of sixteen industry standard 32Mx8 Synchronous DRAMs in Small TSOP and one industory standard EEPROM in TSSOP.

The mounting of Small TSOP on a card edge Dual Inline package provides any application where high densities and large quantities of memory are required.

This is a socket type - memory modules, suitable for easy interchange or addition of modules.

FEATURES

	Frequency	CLK Access Time (Component SDRAM)
-6,-6L	133MHz	5.4ns(CL=3)
-7,-7L	100MHz	6.0ns(CL=2)

- Utilizes industry standard 32M x 8 Synchronous DRAMs Small TSOP and industry standard EEPROM in TSSOP

- 144-pin (72-pin dual in-line package)

- single 3.3V±0.3V power supply

- Max. Clock frequency -6:133MHz,-7:100MHz

- Fully synchronous operation referenced to clock rising edge

- 4 bank operation controlled by BA0,1(Bank Address)

- /CAS latency- 2/3(programmable)

- Burst length- 1/2/4/8/Full Page(programmable)

- Burst type- sequential / interleave(programmable)

- Column access - random

- Auto precharge / All bank precharge controlled by A10

- Auto refresh and Self refresh
- 8192 refresh cycle /64ms

- LVTTL Interface

APPLICATION

main memory or graphic memory in computer systems

PIN FUNCTION

CK (CK0 ,1)	Input	Master Clock:All other inputs are referenced to the rising edge of CK
CKE0,1	Input	Clock Enable:CKE controls internal clock.When CKE is low,internal clock for the following cycle is ceased. CKE is also used to select auto / self refresh. After self refresh mode is started, CKE becomes asynchronous input.Self refresh is maintained as long as CKE is low.
/S (/S0,1)	Input	Chip Select: When /S is high,any command means No Operation.
/RAS,/CAS,/WE	Input	Combination of /RAS,/CAS,/WE defines basic commands.
A0-12	Input	A0-12 specify the Row/Column Address in conjunction with BA0,1.The Row Address is specified by A0-12.The Column Address is specified by A0-9.A10 is also used to indicate precharge option.When A10 is high at a read / write command, an auto precharge is performed. When A10 is high at a precharge command, all banks are precharged.
BA0,1	Input	Bank Address:BA0,1 is not simply BA.BA specifies the bank to which a command is applied.BA0,1 must be set with ACT,PRE,READ,WRITE commands
DQ0-63	Input/Output	Data In and Data out are referenced to the rising edge of CK
DQMB0-7	Input	Din Mask/Output Disable:When DQMB is high in burst write.Din for the current cycle is masked.When DQMB is high in burst read,Dout is disabled at the next but one cycle.
Vdd,Vss	Power Supply	Power Supply for the memory mounted module.
SCL	Input	Serial clock for serial PD
SDA	Output	Serial data for serial PD

BASIC FUNCTIONS

The MH64S64APFH provides basic functions,bank(row)activate,burst read / write, bank(row)precharge,and auto / self refresh.

Each command is defined by control signals of /RAS,/CAS and /WE at CK rising edge. In addition to 3 signals,/S,CKE and A10 are used as chip select,refresh option,and precharge option,respectively.

To know the detailed definition of commands please see the command truth table.

Signal	Description
CK	
/S	Chip Select : L=select, H=deselect
/RAS	Command
/CAS	Command — define basic commands
/WE	Command
CKE	Refresh Option @refresh command
A10	Precharge Option @precharge or read/write command

Activate(ACT) [/RAS =L, /CAS = /WE =H]

ACT command activates a row in an idle bank indicated by BA.

Read(READ) [/RAS =H,/CAS =L, /WE =H]

READ command starts burst read from the active bank indicated by BA.First output data appears after /CAS latency. When A10 =H at this command,the bank is deactivated after the burst read(auto-precharge,**READA**).

Write(WRITE) [/RAS =H, /CAS = /WE =L]

WRITE command starts burst write to the active bank indicated by BA. Total data length to be written is set by burst length. When A10 =H at this command, the bank is deactivated after the burst write(auto-precharge,**WRITEA**).

Precharge(PRE) [/RAS =L, /CAS =H,/WE =L]

PRE command deactivates the active bank indicated by BA. This command also terminates burst read / write operation. When A10 =H at this command, both banks are deactivated(precharge all, **PREA**).

Auto-Refresh(REFA) [/RAS =/CAS =L, /WE =CKE =H]

REFA command starts auto-refresh cycle. Refresh address including bank address are generated internally. After this command, the banks are precharged automatically.

POWER ON SEQUENCE

Before starting normal operation, the following power on sequence is necessary to prevent a SDRAM from damaged or malfunctioning.

1. Apply power and start clock. Attempt to maintain CKE high, DQMB0-7 high and NOP condition at the inputs.
2. Maintain stable power, stable clock, and NOP input conditions for a minimum of 200us.
3. Issue precharge commands for all banks. (PRE or PREA)
4. After all banks become idle state (after tRP), issue 8 or more auto-refresh commands.
5. Issue a mode register set command to initialize the mode register.

After these sequence, the SDRAM is idle state and ready for normal operation.

MODE REGISTER

Burst Length, Burst Type and /CAS Latency can be programmed by setting the mode register(MRS). The mode register stores these date until the next MRS command, which may be issue when both banks are in idle state. After tRSC from a MRS command, the SDRAM is ready for new command.

OPERATION DESCRIPTION

BANK ACTIVATE

One of four banks is activated by an ACT command.

An bank is selected by BA0-1. A row is selected by A0-12.

Multiple banks can be active state concurrently by issuing multiple ACT commands.

Minimum activation interval between one bank and another bank is tRRD.

PRECHARGE

An open bank is deactivated by a PRE command.

A bank to be deactivated is designated by BA0-1.

When multiple banks are active, a precharge all command (PREA, PRE + A10=H) deactivates all of open banks at the same time. BA0-1 are "Don't Care" in this case.

Minimum delay time of an ACT command after a PRE command to the same bank is tRP.

Bank Activation and Precharge All (BL=4, CL=2)
READ

A READ command can be issued to any active bank. The start address is specified by A0-9 (x8) . 1st output data is available after the /CAS Latency from the READ. The consecutive data length is defined by the Burst Length. The address sequence of the burst data is defined by the Burst Type. Minimum delay time of a READ command after an ACT command to the same bank is tRCD.

When A10 is high at a READ command, auto-precharge (READA) is performed. Any command (READ, WRITE, PRE, ACT, TBST) to the same bank is inhibited till the internal precharge is complete. The internal precharge starts at the BL after READA. The next ACT command can be issued after (BL + tRP) from the previous READA. In any case, tRCD+BL $\geq$ tRASmin must be met.

Preliminary Spec.
Some contents are subject to change without notice.

4294967296-BIT (67108864 - WORD BY 64-BIT)SynchronousDRAM

WRITE

A WRITE command can be issued to any active bank. The start address is specified by A0-9 (x8). 1st input data is set at the same cycle as the WRITE. The consecutive data length to be written is defined by the Burst Length. The address sequence of burst data is defined by the Burst Type. Minimum delay time of a WRITE command after an ACT command to the same bank is tRCD. From the last input data to the PRE command, the write recovery time (tWR) is required. When A10 is high at a WRITE command, auto-precharge (WRITEA) is performed. Any command (READ, WRITE, PRE, ACT, TBST) to the same bank is inhibited till the internal precharge is complete. The internal precharge starts at tWR after the last input data cycle. The next ACT command can be issued after (BL + tWR -1 + tRP) from the previous WRITEA. In any case, tRCD + BL + tWR -1 $\geq$ tRASmin must be met.

BURST INTERRUPTION

[Read Interrupted by Read]

Burst read oparation can be interrupted by new read of the same or the other bank. Random column access is allowed READ to READ interval is minimum 1 CK
Read Interrupted by Read (BL=4, CL=2)
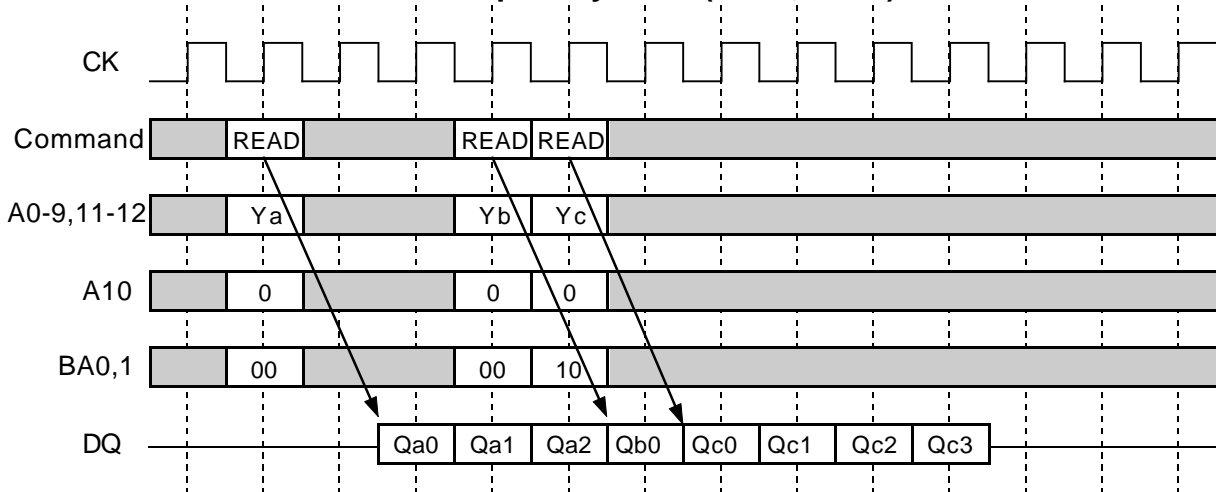

[Read Interrupted by Write]

Burst read operation can be interrupted by write of any active bank. Random column access is allowed. In this case, the DQ should be controlled adequately by using the DQMB0-7 to prevent the bus contention. The output is disabled automatically 2 cycle after WRITE assertion.

Read Interrupted by Write (BL=4, CL=2)

Output disable by DQM   by WRITE

Preliminary Spec.
Some contents are subject to change without notice.

4294967296-BIT (67108864 - WORD BY 64-BIT)SynchronousDRAM

AUTO REFRESH

Single cycle of auto-refresh is initiated with a REFA(/CS=/RAS=/CAS=L, /WE=/CKE=H) command. The refresh address is generated internally. 8192 REFA cycle within 64ms refresh 256Mbit memory cells. The auto-refresh is performed on 4banks concurrently. Before performing an auto-refresh, all banks must be in the idle state. Auto-refresh to auto-refresh interval is minimum tRFC. Any command must not be issued before tRFC from the REFA command.

Auto-Refresh

Preliminary Spec.
Some contents are subject to change without notice.

MITSUBISHI LSIs
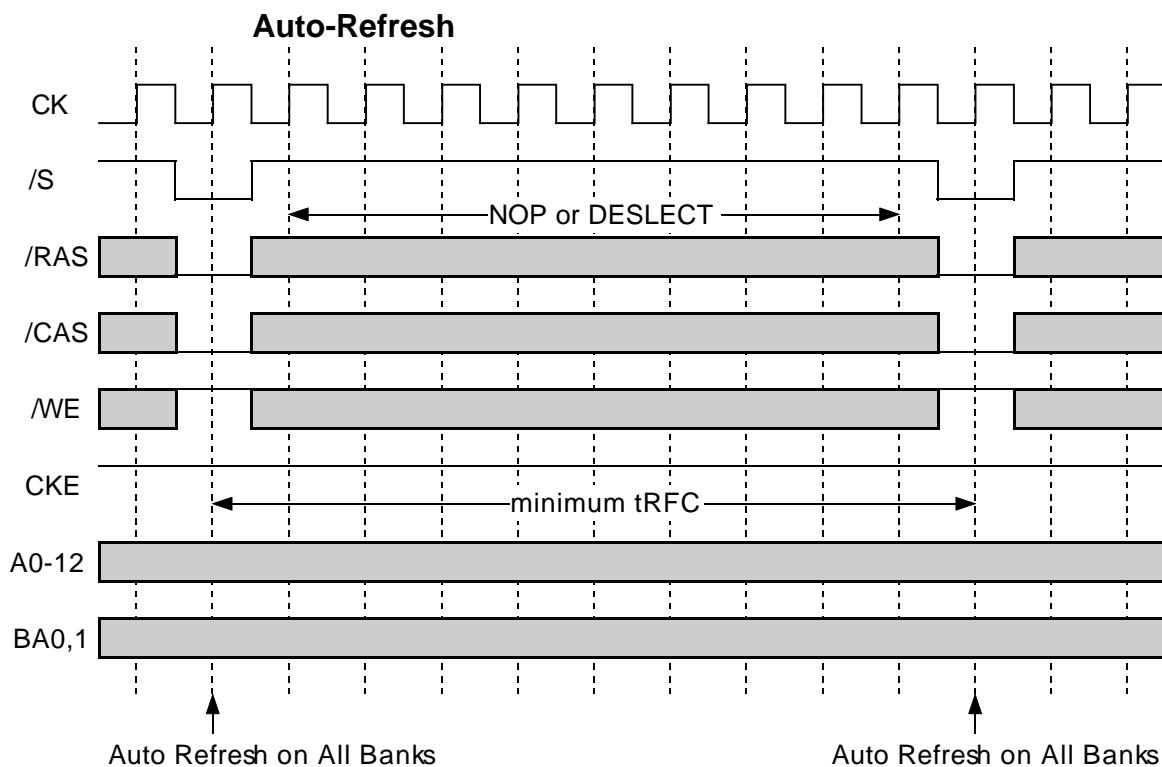

MH64S64APFH-6,-6L,-7,-7L
4294967296-BIT (67108864 - WORD BY 64-BIT)SynchronousDRAM

SELF REFRESH

Self-refresh mode is entered by issuing a REFS command (/CS=/RAS=/CAS=L, /WE=H, CKE=L). Once the self-refresh is initiated, it is maintained as log as CKE is kept low.During the self-refresh mode, CKE is asynchronous and the only enabled input , all other inputs including CK are disabled and ignored, so that power consumption due to synchronous inputs is saved. To exit the self-refresh, supplying stable CK inputs, asserting DESEL or NOP command and then asserting CKE=H. After tRFC from the 1st CK edge follwing CKE=H, all banks are in the idle state and a new command can be issued after, but DESEL or NOP commands must be asserted till then.

Self-Refresh

4294967296-BIT (67108864 - WORD BY 64-BIT)SynchronousDRAM

CLK SUSPEND and POWER DOWN

 CKE controls the internal CLK at the following cycle. Figure below shows how CKE works. By negating CKE, the next internal CLK is suspended. The purpose of CLK suspend is power down, output suspend or input suspend. CKE is a synchronous input except during the self-refresh mode. CLK suspend can be performed either when the banks are active or idle. A command at the suspended cycle is ignored.
Power Down by CKE

DQ Suspend by CKE

4294967296-BIT (67108864 - WORD BY 64-BIT)SynchronousDRAM

DQM CONTROL

DQMB0-7 is a dual function signal defined as the data mask for writes and the output disable for reads. During writes, DQMB0-7 masks input data word by word. DQMB0-7 to Data In latency is 0.

During reads, DQMB0-7 forces output to Hi-Z word by word. DQMB0-7 to output Hi-Z latency is 2.

DQM Function

masked by DQMB=H   disabled by DQMB=H

4294967296-BIT (67108864 - WORD BY 64-BIT)SynchronousDRAM

Read Interrupted by Read @BL=4 CL=2

*Italic parameter* indicates minimum case

Preliminary Spec.
Some contents are subject to change without notice.

MITSUBISHI LSIs

MH64S64APFH-6,-6L,-7,-7L
4294967296-BIT (67108864 - WORD BY 64-BIT)SynchronousDRAM

## Write Interrupted by Read, Read Interrupted by Write @BL=4,CL=2

Italic parameter indicates minimum case

Preliminary Spec.
Some contents are subject to change without notice.

MITSUBISHI LSIs

MH64S64APFH-6,-6L,-7,-7L

4294967296-BIT (67108864 - WORD BY 64-BIT)Synchronous DRAM
Write/Read Terminated by Precharge @BL=4 CL=2

Italic parameter indicates minimum case

Preliminary Spec.
Some contents are subject to change without notice.

MITSUBISHI LSIs

MH64S64APFH-6,-6L,-7,-7L
4294967296-BIT (67108864 - WORD BY 64-BIT)SynchronousDRAM
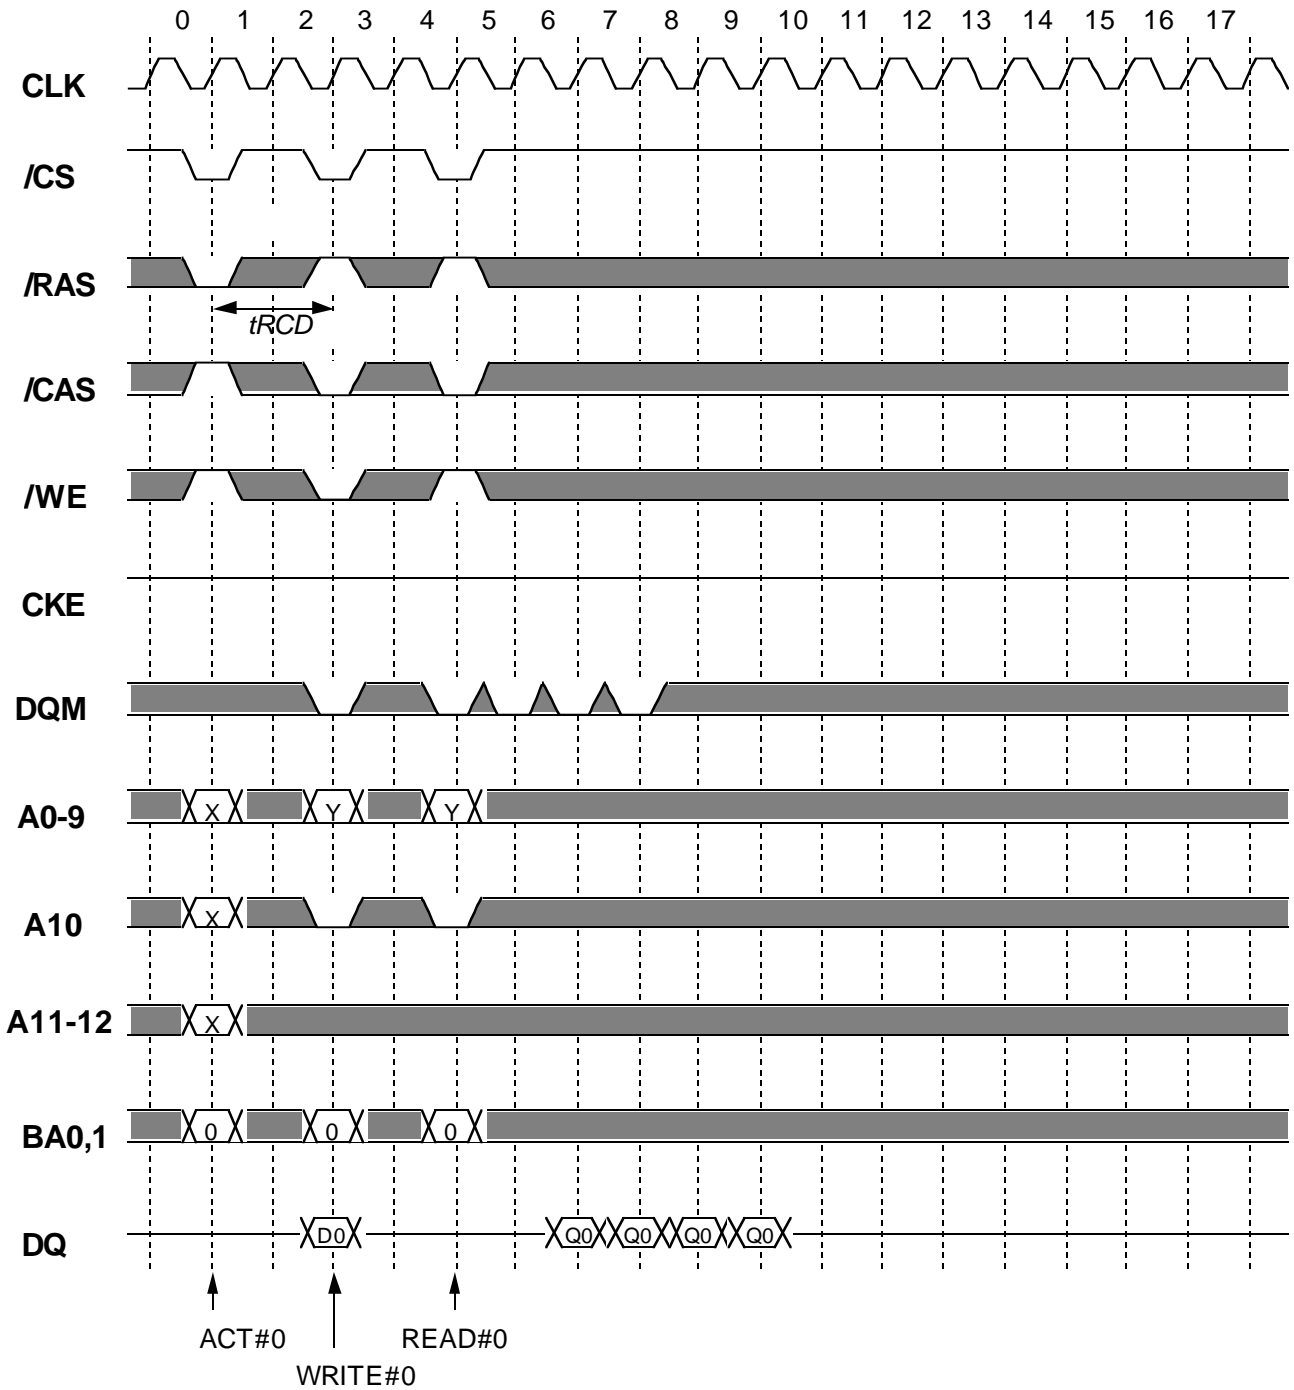

Write/Read Terminated by Burst Terminate @BL=4,CL=2

Italic parameter indicates minimum case

Preliminary Spec.
Some contents are subject to change without notice.

MITSUBISHI LSIs

MH64S64APFH-6,-6L,-7,-7L
4294967296-BIT (67108864 - WORD BY 64-BIT)SynchronousDRAM
Single Write Burst Read @BL=4 CL=2

Italic parameter indicates minimum case

EEPROM Components A.C. and D.C. Characteristics

Symbol	Parameter	Limits			Units
		Min.	Typ.	Max.	
Vcc	Supply Voltage	3.0	3.3	3.6	V
Vss	Supply Voltage	0	0	0	V
VIH	Input High Voltage	Vddx0.7			V
VIL	Input Low Voltage	-0.3		Vccx0.3	V
VOL	Output Low Voltage			0.4	V

EEPROM A.C.Timing Parameters (Ta=0 to 70C)

Symbol	Parameter	Limits		Units
		Min.	Max.	
fSCL	SCL Clock Frequency		80	KHz
TI	Noise Supression Time Constant at SCL, SDA inputs		100	ns
TAA	SCL Low to SDA Data Out Valid	0.3	7.0	us
TBUF	Time the Bus Must Be Free before a New Transmission Can Start	6.7		us
THD:STA	Start Condition Hold Time	4.5		us
TLOW	Clock Low Time	6.7		us
THIGH	Clock High Time	4.5		us
TSU:STA	Start Condition Setup Time	6.7		us
THD:DAT	Data In Hold Time	0		us
TSU:DAT	Data In Setup Time	500	1	ns
TR	SDA and SCL Rise Time		1	us
TF	SDA and SCL Fall Time		300	ns
TSU:STO	Stop Condition Setup Time	6.7		us
TDH	Data Out Hold Time	300		ns
TWR	Write Cycle Time		15	ms

tWR is the time from a valid stop condition of a write sequence to the end of the EEPROM internal erase/program cycle.

Preliminary Spec.
Some contents are subject to change without notice.

Keep safety first in your circuit designs!

Mitsubishi Electric Corporation puts the maximum effort into making semiconductor products better and more reliable, but there is always the possibility that trouble may occur with them. Trouble with semiconductors may lead to personal injury, fire or property damage. Remember to give due consideration to safety when making your circuit designs, with appropriate measures such as (i) placement of substitutive, auxiliary circuits, (ii) use of non-flammable material or (iii) prevention against any malfunction or mishap.

Notes regarding these materials

1. These materials are intended as a reference to assist our customers in the selection of the Mitsubishi semiconductor product best suited to the customer's application; they do not convey any license under any intellectual property rights, or any other rights, belonging to Mitsubishi Electric Corporation or a third party.

2. Mitsubishi Electric Corporation assumes no responsibility for any damage, or infringement of any third-party's rights, originating in the use of any product data, diagrams, charts, programs, algorithms, or circuit application examples contained in these materials.

3. All information contained in these materials, including product data, diagrams, charts, programs and algorithms represents information on products at the time of publication of these materials, and are subject to change by Mitsubishi Electric Corporation without notice due to product improvements or other reasons. It is therefore recommended that customers contact Mitsubishi Electric Corporation or an authorized Mitsubishi Semiconductor product distributor for the latest product information before purchasing a product listed herein.
The information described here may contain technical inaccuracies or typographical errors. Mitsubishi Electric Corporation assumes no responsibility for any damage, liability, or other loss rising from these inaccuracies or errors.
Please also pay attention to information published by Mitsubishi Electric Corporation by various means, including the Mitsubishi Semiconductor home page (http://www.mitsubishichips.com).

4. When using any or all of the information contained in these materials, including product data, diagrams, charts, programs and algorithms, please be sure to evaluate all information as a total system before making a final decision on the applicability of the information and products.
Mitsubishi Electric Corporation assumes no responsibility for any damage, liability or other loss resulting from the information contained herein.

5. Mitsubishi Electric Corporation semiconductors are not designed or manufactured for use in a device or system that is used under circumstances in which human life is potentially at stake. Please contact Mitsubishi Electric Corporation or an authorized Mitsubishi Semiconductor product distributor when considering the use of a product contained herein for any specific purposes, such as apparatus or systems for transportation, vehicular, medical, aerospace, nuclear, or undersea repeater use.

6. The prior written approval of Mitsubishi Electric Corporation is necessary to reprint or reproduce in whole or in part these materials.

7. If these products or technologies are subject to the Japanese export control restrictions, they must be exported under a license from the Japanese government and cannot be imported into a country other than the approved destination.
Any diversion or reexport contrary to the export control laws and regulations of Japan and/or the country of destination is prohibited.

8. Please contact Mitsubishi Electric Corporation or an authorized Mitsubishi Semiconductor product distributor for further details on these materials or the products contained therein.
