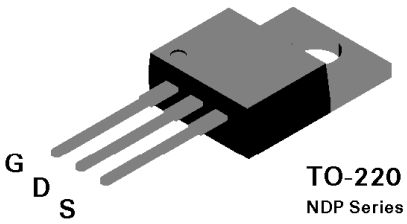
N-Channel Enhancement Mode Field Effect Transistor

General Description

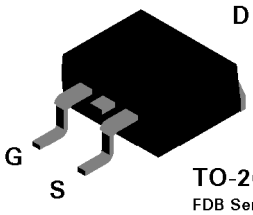
These N-channel enhancement mode power field effect transistors are produced using Fairchild's proprietary, high cell density, DMOS technology. This very high density process has been especially tailored to minimize on-state resistance, provide superior switching performance, and withstand high energy pulses in the avalanche and commutation modes. These devices are particularly suited for low voltage applications such as automotive, DC/DC converters, PWM motor controls, and other battery powered circuits where fast switching, low in-line power loss, and resistance to transients are needed.

Features

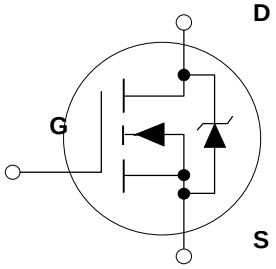
- 60 and 54A, 80V. $R_{DS(ON)}$ = 0.022 and 0.025Ω.
- Critical DC electrical parameters specified at elevated temperature.
- Rugged internal source-drain diode can eliminate the need for an external Zener diode transient suppressor.
- 175°C maximum junction temperature rating.
- High density cell design (3 million/in²) for extremely low $R_{DS(ON)}$.
- TO-220 and TO-263 (D^2PAK) package for both through hole and surface mount applications.



TO-220
NDP Series



TO-263AB
FDB Series



Absolute Maximum Ratings

T_C = 25°C unless otherwise noted

Symbol	Parameter	NDP708A NDP708AE NDB708A NDB708AE	NDP708B NDP708BE NDB708B NDB708BE	Units
V_{DSS}	Drain-Source Voltage	80		V
V_{DGR}	Drain-Gate Voltage ($R_{GS} \leq 1$ MΩ)	80		V
V_{GSS}	Gate-Source Voltage - Continuous	±20		V
	- Nonrepetitive ($t_P < 50$ µs)	±40		V
I_D	Drain Current - Continuous	60	54	A
	- Pulsed	180	162	A
P_D	Total Power Dissipation @ T_C = 25°C	150		W
	Derate above 25°C	1		W/°C
T_J,T_{STG}	Operating and Storage Temperature Range	-65 to 175		°C
T_L	Maximum lead temperature for soldering purposes, 1/8" from case for 5 seconds	275		°C

Electrical Characteristics (T_C = 25°C unless otherwise noted)
