## General Purpose EMI Reduction IC

### Features

- FCC approved method of EMI attenuation
- Provides up to 15 dB of EMI suppression
- Generates a **1 X** or **½ X** low EMI spread spectrum clock of the input frequency
- Output frequency from **6MHz to 20MHz**
- Digital spread selections
- Spreading ranges from +/-0.4% to +/-5.0%
- Ultra low cycle-to-cycle jitter
- Zero-cycle slip
- 3.3V and 5.0V operating voltage range
- 10 mA output drives
- TTL or CMOS compatible outputs
- Ultra-low power CMOS design
- Available in 8 pin SOIC and TSSOP

### Product Description

The P2681A is a versatile spread spectrum frequency modulator designed specifically for digital camera and other digital video and imaging applications. The P2681A reduces electromagnetic interference (EMI) at the clock source, which provides system wide reduction of EMI of all clock dependent signals. The P2681A allows significant

system cost savings by reducing the number of circuit board layers and shielding that are traditionally required to pass EMI regulations.

The P2681A uses the most efficient and optimized modulation profile approved by the FCC.

The P2681A modulates the output of a single PLL in order to “spread” the bandwidth of a synthesized clock and, more importantly, decreases the peak amplitudes of its harmonics. This results in significantly lower system EMI compared to the typical narrow band signal produced by oscillators and most frequency generators. Lowering EMI by increasing a signal’s bandwidth is called “spread spectrum clock generation”.

### Applications

The P2681A is targeted towards MFP, xDSL, fax modem, set-top box, USB controller, DSC, and embedded systems.

### Pin Configuration

### Pin Description

Pin#	Pin Name	Type	Description
1	XIN/CLKIN	I	Connect to crystal or clock input.
2	XOUT	I	Crystal output
3	DIV2	I	Digital logic input used to select normal output mode or divide-by-2 output mode. When this pin is Low, the frequency of the output clock is the same as the input clock frequency. When it is tied High, the output frequency is half the input clock frequency. This pin has an internal pull-low resistor.
4	LF	I	External Loop Filter for the PLL. By changing the value of the CRC circuit, the % spread can be adjusted accordingly. See Table 1.2 for detail value.
5	VSS	I	Ground Connection. Connect to system ground.
6	ModOUT	O	Spread Spectrum Clock Output.
7	SR0	I	Digital logic input used to select Spreading Range between large or small for a given LF value (see Table 1.1 and 1.2). When SR0=0, the spreading % is smaller than SR0=1. This pin has an internal pull-up resistor.
8	VDD	P	Connect to +3.3V or 5.0V

**Spread Spectrum Selection**

The P2681A performs Zero Cycle Slip when sets at low % spreading. This allows no occurrence of system timing error. The optimal setting should minimize system EMI to the fullest without affecting system performance. The spreading is described as a percentage deviation of the center frequency (Note: the center frequency is the frequency of the external reference input on CLKIN, Pin 1).

**Example:** The P2681A is designed for PC peripheral applications. It is not only optimized for operation between 6MHz – 16MHz range, but its output frequency can be extended down to one half of the input clock frequency using the Divide-by-Two feature. This feature extends low frequency operation to as low as 3MHz. Setting Pin 3 high (**DIV2=1**; Divide-by-Two mode) sets the output frequency (**ModOUT**) to half the frequency of the input clock (**CLKIN**). This is a simple way to generate a spread spectrum modulated low frequency clock when only a higher frequency signal is available. If you want the output frequency to be the same as the input, you need to set **DIV2=0**.

The P2681A's spread % selection is determined by the external LF value specified in Table 2. Table 1 provides a particular LF value which allows the % spreading to be selected between +/-0.75% or +/-1.30% by setting SR0 to either 0 and 1. At a specified LF value (See Table 2), SR0 pin allows the user to have the flexibility to digitally select between large or small % spreading by setting SR0=1 or SR0=0 respectively.

### EMC Software Simulation

By using Alliance Semiconductor's proprietary EMC simulation software – EMI-lator®, radiated system level EMI analysis can be made easier to allow a quantitative assessment on Alliance's EMI reduction products. The simulation engine of this EMC software has already been characterized to correlate with the electrical characteristics of Alliance EMI reduction IC's. The figure below is an example of the simulation result. Please visit our web site at [www.alsc.com](http://www.alsc.com) for information on how to obtain a free copy and demonstration of EMI-lator®.

**Absolute Maximum Ratings**

Symbol	Parameter	Rating	Unit
$V_{DD}, V_{IN}$	Voltage on any pin with respect to GND	-0.5 to + 7.0	V
$T_{STG}$	Storage temperature	-65 to +125	°C
$T_A$	Operating temperature	0 to +70	°C

**DC Electrical Characteristics**

Symbol	Parameter	Min	Typ	Max	Unit
$V_{IL}$	Input Low Voltage	GND – 0.3	-	0.8	V
$V_{IH}$	Input High Voltage	2.0	-	$V_{DD} + 0.3$	V
$I_{IL}$	Input Low Current (internal input pull-up resistor on DIV2 and SR0)	-	TBD	-	$\mu$ A
$I_{IH}$	Input High Current (internal input pull-up resistor on DIV2 and SR0)	-	TBD	-	$\mu$ A
$I_{XOL}$	XOUT Output Low Current (@ 0.4V, $V_{DD} = 3.3V$ )	-	TBD	-	mA
$I_{XOH}$	XOUT Output High Current (@ 2.5V, $V_{DD} = 3.3V$ )	-	TBD	-	mA
$V_{OL}$	Output Low Voltage ( $V_{DD} = 3.3V, I_{OL} = 20$ mA)	-	-	0.4	V
$V_{OH}$	Output High Voltage ( $V_{DD} = 3.3V, I_{OH} = 20$ mA)	2.5	-	-	V
$I_{DD}$	Static Supply Current	-	TBD	-	mA
$I_{CC}$	Dynamic Supply Current (3.3V and 10 pF loading)	3 Xin=6MHz	TBD	15 Xin=20MHz	mA
$V_{DD}$	Operating Voltage	TBD	3.3	TBD	V

**AC Electrical Characteristics**

Symbol	Parameter	Min	Typ	Max	Unit
$f_{IN}$	Input Frequency when	6	-	20	MHz
$t_{LH}^*$	Output rise time (Measured at 0.8V to 2.0V)		TBD		ns
$t_{HL}^*$	Output fall time (Measured at 0.8V to 2.0V)		TBD		ns
$t_{JC}$	Jitter (cycle to cycle)	-	-	TBD	ps
$t_D$	Output duty cycle	45	50	55	%

\* $t_{LH}$  and  $t_{HL}$  are measured into a capacitive load of 15pF
