Notes :

1. The RP40 series required a minimum 10% loading on the output to maintain specified regulation. Operation under no-load condition will not damage these devices, however they may not meet all listed specification.
2. BELLCORE TR-NWT-000332. Case I: 50% Stress, Temperature at 40°C (Ground fixed and controlled environment).
3. Simulated source impedance of 12μH. 12μH inductor in series with +Vin.
4. Maximum value at nominal input voltage and full load of standard type.
5. Typical value at nominal input voltage and full load.
6. Test by minimum Vin and constant resistor load.
7. The ON/OFF control pin voltage is referenced to negative input
8. Cross regulation:
Dual output—Asymmetrical load 25% to 100% full load
Triple output – 3.3V / 5V 100% load and one of auxiliary 100% load, other auxiliary load change from 25% to 100% load
9. See application notes for EMI-filtering.

Application of Synchronization

1. The unit is capable of external synchronization from an independent time base with a switching rate between 200kHz and 215 kHz.
2. The amplitude of the synchronizing pulse train is TTL compatible.
3. The duty cycle of the CLK should be 20% high and 80% low.
4. Synchronization is referenced to negative input (-Vin).

External Output Trimming

Output can be externally trimmed by using the method shown below.

- () for dual output trim
- [] for triple output trim
- { } for RP40-xx3.305DE only trim 3.3V / 5V
