- Functionally Equivalent to 'ALS29863 and AMD Am29863A
- Power-Up High-Impedance State
- ESD Protection Exceeds 2000 V Per MIL-STD-883C, Method 3015
- Package Options Include Plastic Small-Outline Packages (DW), Ceramic Chip Carriers (FK) and Flatpacks (W), and Standard Plastic and Ceramic 300-mil DIPs (JT, NT)

description

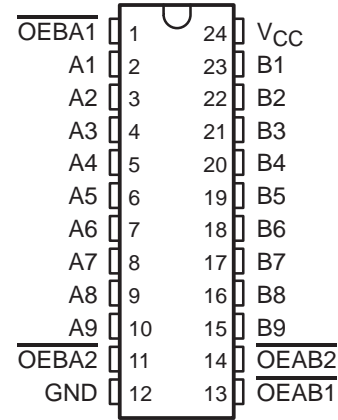

These 9-bit transceivers are designed for asynchronous communication between data buses. The control-function implementation allows for maximum flexibility in timing.

These devices allow data transmission from the A bus to the B bus or from the B bus to the A bus, depending upon the logic levels at the output-enable (\overline{OEBA} and \overline{OEAB}) inputs.

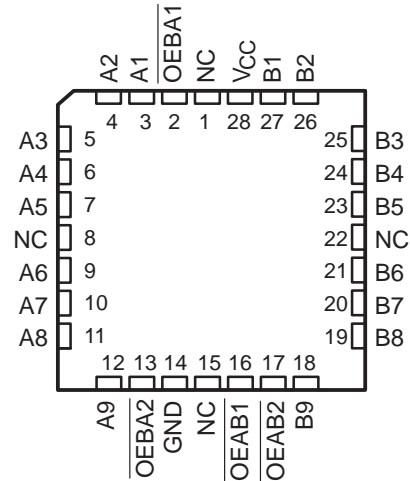

The outputs are in the high-impedance state during power-up and power-down conditions. The outputs remain in the high-impedance state while the device is powered down.

The SN54BCT29863B is characterized for operation over the full military temperature range of -55°C to 125°C . The SN74BCT29863B is characterized for operation from 0°C to 70°C .

Input voltage range (I/O ports) (see Note 1)	-0.5 V to 5.5 V
Input voltage range (excluding I/O ports) (see Note 1)	-0.5 V to 7 V
Voltage range applied to any output in the high state	-0.5 V to V_{CC}
Input clamp current	-30 mA
Current into any output in the low state: SN54BCT29863B	48 mA
SN74BCT29863B	96 mA
Operating free-air temperature range: SN54BCT29863B	-55°C to 125°C
SN74BCT29863B	0°C to 70°C
Storage temperature range	-65°C to 150°C

‡ Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTE 1: The negative input voltage ratings may be exceeded if the input current rating is observed.
