- Low Clock-to-Cutoff-Frequency Ratio Error  
 TLC04/MF4A-50 ...  $\pm 0.8\%$   
 TLC14/MF4A-100 ...  $\pm 1\%$
- Filter Cutoff Frequency Dependent Only on External-Clock Frequency Stability
- Minimum Filter Response Deviation Due to External Component Variations Over Time and Temperature
- Cutoff Frequency Range from 0.1 Hz to 30 kHz,  $V_{CC} \pm = \pm 2.5 V$
- 5-V to 12-V Operation
- Self Clocking or TTL-Compatible and CMOS-Compatible Clock Inputs
- Low Supply Voltage Sensitivity
- Designed to be Interchangeable with National MF4-50 and MF4-100

**description**

The TLC04/MF4A-50 and TLC14/MF4A-100 are monolithic Butterworth low-pass switched-capacitor filters. Each is designed as a low-cost, easy-to-use device providing accurate fourth-order low-pass filter functions in circuit design configurations.

Each filter features cutoff frequency stability that is dependent only on the external-clock frequency stability. The cutoff frequency is clock tunable and has a clock-to-cutoff frequency ratio of 50:1 with less than  $\pm 0.8\%$  error for the TLC04/MF4A-50 and a clock-to-cutoff frequency ratio of 100:1 with less than  $\pm 1\%$  error for the TLC14/MF4A-100. The input clock features self-clocking or TTL- or CMOS-compatible options in conjunction with the level shift (LS) pin.

The TLC04M/MF4A-50M and TLC14M/MF4A-100M are characterized over the full military temperature range of  $-55^{\circ}C$  to  $125^{\circ}C$ . The TLC04I/MF4A-50I and TLC14I/MF4A-100I are characterized for operation from  $-40^{\circ}C$  to  $85^{\circ}C$ . The TLC04C/MF4A-50C and TLC14C/MF4A-100C are characterized for operation from  $0^{\circ}C$  to  $70^{\circ}C$ .

## pin description

PIN NAME	NO.	I/O	DESCRIPTION
AGND	6	I	Analog Ground — The noninverting input to the operational amplifiers of the Butterworth fourth-order low-pass filter.
CLKIN	1	I	Clock In — The clock input terminal for CMOS-compatible clock or self-clocking options. For either option, the Level Shift (LS) terminal is at V <sub>CC-</sub> . For self-clocking, a resistor is connected between the CLKIN and CLKR terminal pins and a capacitor is connected from the CLKIN terminal pin to ground.
CLKR	2	I	Clock R — The clock input for a TTL-compatible clock. For a TTL clock, the level shift pin is connected to mid-supply and the CLKIN pin may be left open, but it is recommended that it be connected to either V <sub>CC+</sub> or V <sub>CC-</sub> .
FILTER IN	8	I	Filter Input
FILTER OUT	5	O	Butterworth fourth-order low-pass Filter Output
LS	3	I	Level Shift — This terminal accommodates the various input clocking options. For CMOS-compatible clocks or self-clocking, the level-shift terminal is at V <sub>CC-</sub> and for TTL-compatible clocks, the level-shift terminal is at mid-supply.
V <sub>CC+</sub>	7	I	Positive supply voltage terminal
V <sub>CC-</sub>	4	I	Negative supply voltage terminal
