FEATURES

- Anti Latchup Capability
- Monolithic Design
- High Slew Rate
- Low Offset/Drift Voltage
- Low Gate Leakage: 5 pA
- Low Noise
- High CMRR: 100 dB

BENEFITS

- External Substrate Bias—Avoids Latchup
- Tight Differential Match vs. Current
- Improved Op Amp Speed, Settling Time Accuracy
- Minimum Input Error/Trimming Requirement
- Insignificant Signal Loss/Error Voltage
- High System Sensitivity
- Minimum Error with Large Input Signal

APPLICATIONS

- Wideband Differential Amps
- High-Speed, Temp-Compensated, Single-Ended Input Amps
- High Speed Comparators
- Impedance Converters

DESCRIPTION

The SST/U5196NL series of JFET duals are designed for high-performance differential amplification for a wide range of precision test instrumentation applications. This series features tightly matched specs, low gate leakage for accuracy, and wide dynamic range with I_G guaranteed at V_{DG} = 20 V.

Pins 4 and 8 of the SST series and pin 4 on the U series part numbers enable the substrate to be connected to a positive, external bias (V_{DD}) to avoid latchup.

Marking Codes:

SST5198NL - 5198NL
SST5199NL - 5199NL

The U series in the hermetically-sealed TO-78 package is available with full military processing. The SST series SO-8 package provides ease of manufacturing and the symmetrical pinout prevents improper orientation. The SO-8 package is available with tape-and-reel options for compatibility with automatic assembly methods.

For similar products see the low-noise SST/U401NL series and the low-leakage U421NL/423NL data sheets.
