

# VKA75xS

## 75 Watt Single Output Half Brick DC/DC Converter

- 18-36 V & 33 75V Input Range
- High Efficiency: 87% Typical at 5V
- 100µS Transient Response 50-100% Load Step
- 420 kHz Fixed-Frequency Operation
- Remote Sense
- Operation to +100°C Baseplate Temperature

- Primary Remote On/Off, Choice of Pos/Neg Logic
- Adjustable Output Voltage
- Continuout Short-Circuit Protection
- Thermal Shutdown
- Case Ground Pin
- UL/CUL 60950, VDE EN60950

The VKA75xS Series DC/DC converters present an economical and practical solution for distributed power system architectures which require high power density and efficiency while maintaining system modularity and upgradeability. With the ability to operate over a wide input voltage range of 18 to 36 and 33 to 75 volts, these modules are ideal for use in battery backup applications common in todays' telecommunication and electronic data processing applications. The output is fully isolated from the input, allowing for a variety of polarity and grounding configurations. The VKA75xS's proprietary control circuitry responds to 50-100% load steps in 100µSeconds to within 1% nominal Vout.

The patented fixed frequency architecture combined with surface mount technology results in a compact, efficient and reliable solution to DC/DC conversion requirements.

PRODUCT SELECTION CHART										
MODEL	INPUT VOLTAGE	VOUT (VDC)	IOUT (A)	EFFICIE	EFFICIENCY MIN TYP					
VKA75LS02		2.0V	15.0	75	76					
VKA75LS03		3.3V	15.0	80	81					
VKA75LS05	24VDC	5.0V	15.0	85	86					
VKA75LS12		12.0V	6.3	87	88					
VKA75LS15	(18-36)	15.0V	5.0	88	89					
VKA75LS24		24.0V	3.1	89	90					
VKA75MS02		2.0V	15.0	76	77					
VKA75MS03		3.3V	15.0	81	82					
VKA75MS05	48VDC	5.0V	15.0	86	87					
VKA75MS12		12.0V	6.3	88	89					
VKA75MS15	(33-75)	15.0V	5.0	89	90					
VKA75MS24		24.0V	3.1	89	90					

**SPECIFICATIONS, ALL MODELS** Specifications are at  $T_{CASE}$  = +40°C nominal input voltage unless otherwise specified.

### MECHANICAL

#### **OUTPUT ADJUST VOLTAGE**

This feature allows the user to accurately adjust the module's output voltage set point to a specified level. This is achieved by connecting a resistor or potentiometer from the TRIM terminal to either the +Vout terminal (for increased Vout) or the -Vout terminal (for decreased Vout). The formulae below describe the trim resistor value to obtain a Vout change of  $\Delta$ %. Vo is output voltage prior to adjustment (3.3V, 5V, 12V, 15V, or 24V).

Radj - up = 
$$\left(\frac{Vo(100 + \Delta\%)}{1.225\Delta\%} - \frac{(100 + 2\Delta\%)}{\Delta\%}\right) k\Omega$$
  
Radj - down =  $\left(\frac{100}{\Delta\%} - 2\right) k\Omega$ 

Power Electronics Division, Americas 3400 E Britannia Drive, Tucson, Arizona 85706 Tel: 800.547.2537 Fax: 520.295.4197

#### **OVP NOTE**

Special attention should be given to the peak voltage deviation during a dynamic load step when trimming the output above the original set point to avoid tripping the overvoltage protection circuit. Should an OVP condition occur, the converter will go into a latch condition and must be externally reset before it will return to normal operation.
