

VKQ100MS05

100 Watt, 5.0Vout, Quarter Brick DC/DC Converter

FEATURES

- 36 - 75V Input Range
- Small Size: 1.5" x 2.3" x .50"
- High Efficiency: $\geq 86\%$
- Fixed Frequency Operation 480kHz
- Primary Remote On/Off
- Adjustable Output Voltage
- Brick Wall Current Limiting
- On Board Input Differential Filter
- No Minimum Load Requirement
- Remote Sense

- No Heatsink Required
- No External Components Required
- Safety per UL/CUL 60950, EN 60950, Operational Insulation Meets TNV-SELV Isolation Requirements

APPLICATIONS

- Distributed Power Architectures
- Telecommunications
- Battery Powered Systems
- Workstations

The VKQ100MS05 DC/DC converter presents an economical and practical solution for distributed power system architectures which require high power density and efficiency while maintaining system modularity and upgradeability. With the ability to operate over a wide input voltage range of 36 to 75 Vdc, this module is ideal for telecommunications and battery backup applications where

input flexibility must be combined with output voltage regulation. In addition, the output is fully isolated from the input, allowing for a variety of polarity and grounding configurations.

Innovative circuit design using surface mount components results in a compact, efficient and reliable solution to DC/DC conversion needs. Internal power dissipation is minimized by the

VKQ100MS05's high efficiency and is aided by a metal baseplate to which all heat dissipative elements are coupled.

The control circuitry of the VKQ100MS05 has been designed to provide overvoltage protection as well as current limiting for continuous short-circuit protection.

- Notes:**
1. A future Application Note will detail the technique used to measure the reflected ripple current.
 2. Refer to Power Derating Curve below for details on Output Current Derating with Ambient Temperature. A future Application Note will detail air flow characterization.
 3. Refer to performance curves section (pages 4 and 5) for variation in output ripple and noise with Ambient Temperature, Input Voltage and Output Current. The unit requires a ceramic capacitor of $0.022\mu\text{F}$ across measurement terminals. A future Application Note will detail measurement set up for output ripple and noise.
 4. Refer to performance curves section for variation in efficiency against Input Voltage, Ambient Temperature, Output Load and Frequency.
