

## High Speed LDO Regulator, Low ESR Cap. Compatible, Output ON/OFF Control

### ■ GENERAL DESCRIPTION

The XC6209/XC6212 series are highly precise, low noise, positive voltage LDO regulators manufactured using CMOS processes. The series achieves high ripple rejection and low dropout and consists of a voltage reference, an error amplifier, a current limiter and a phase compensation circuit plus a driver transistor.

Output voltage is selectable in 50mV increments within a range of 0.9V ~ 6.0V. The series is also compatible with low ESR ceramic capacitors which give added output stability. This stability can be maintained even during load fluctuations due to the excellent transient response of the series. The current limiter's foldback circuit also operates as a short protect for the output current limiter and the output pin. The CE function enables the output to be turned off, resulting in greatly reduced power consumption.

### ■ APPLICATIONS

- Mobile phones, Cordless phones
- Wireless communication equipment
- Portable games
- Cameras, Video recorders
- Portable AV equipment
- Reference voltage
- Battery powered equipment

### ■ FEATURES

Maximum Output Current	: 150mA (300mA=XC6209E to H types)
Dropout Voltage	: 60mV @ 30mA 200mV @ 100mA
Minimum Operating Voltage	: 2.0~10.0V
Output Voltage Range	: 0.9V ~ 6.0V (50mV increment)
Highly Accurate	: $\pm 2\%$ ( $V_{OUT} > 1.5V$ ) $\pm 30mV$ ( $V_{OUT} \leq 1.5V$ )
Low Power Consumption	: 25 $\mu A$ (TYP.)
Stand-by Current	: Less than 0.1 $\mu A$ (TYP.)
Highly Ripple Rejection	: 70dB (10kHz)
Operating Temperature Range	: -40°C ~ +85°C
Low ESR Capacitor	: Ceramic capacitor compatible
Process	: CMOS
Built-In Circuit	: Current Limit Circuit
Ultra Small Packages	: SOT-25 USP-6B (XC6209) SOT-89-5 (XC6209)

### ■ TYPICAL APPLICATION CIRCUIT

### ■ TYPICAL PERFORMANCE CHARACTERISTICS

## PIN CONFIGURATION

[XC6209]

\*The dissipation pad for the USP-6B package should be solder-plated in recommended mount pattern and metal masking so as to enhance mounting strength and heat release.

[XC6212]

## PIN ASSIGNMENT

PIN NUMBER				PIN NAME	FUNCTION
XC6209		XC6212			
SOT-25	SOT-89-5	USP-6B	SOT-25		
1	4	1	3	V <sub>IN</sub>	Input
2	2	5	2	V <sub>SS</sub>	Ground
3	3	6	4	CE	ON/OFF Control
4	1	2,4	5	NC	No Connection
5	5	3	1	V <sub>OUT</sub>	Output

## FUNCTIONS

TYPE	CE	OPERATIONAL STATE
A, B, E, F Series	H	ON
	L	OFF
C, D, G, H Series	H	OFF
	L	ON

H=High Level

L=Low Level

## ■ PRODUCT CLASSIFICATION

### ● Selection Guide

The following options for the CE pin logic and internal pull-up/down are available:

High Active + no pull-down resistor built-in (standard)

High Active+ 2M $\Omega$  pull-down resistor built-in <between CE-V<sub>SS</sub>> (semi-custom)

Low Active + no pull-up resistor built-in (semi-custom)

Low Active + 2M $\Omega$  pull-up resistor built-in <between V<sub>IN</sub>-CE> (semi-custom)

Note: \*With the pull-up resistor or pull-down resistor built-in types, the supply current during operation will increase by V<sub>IN</sub> / 2M $\Omega$  (TYP.).

### ● Ordering Information

XC6209/12①②③④⑤⑥

DESIGNATOR	DESCRIPTION	SYMBOL	DESCRIPTION
① (*1)	Type of Regulator CE Pin Logic	A/E	: High Active (pull-down resistor built-in, semi-custom)
		B/F	: High Active (no pull-down resistor built-in, standard)
		C/G	: Low Active (pull-up resistor built-in, semi-custom)
		D/H	: Low Active (no pull-up resistor built-in, standard)
② ③	Output Voltage	09~60	: e.g. 20:2.0V, 30:3.0V,
④	Output Voltage Accuracy	2	: 100mV increments, $\pm 2\%$ accuracy (*2) e.g. ②=2, ③=8, ④=2 $\rightarrow$ 2.80V, $\pm 2\%$
		1	: 100mV increments, $\pm 1\%$ accuracy (*2) e.g. ②=2, ③=8, ④=1 $\rightarrow$ 2.80V, $\pm 1\%$
		A	: 50mV increments, $\pm 2\%$ accuracy (*2) e.g. ②=2, ③=8, ④=A $\rightarrow$ 2.85V, $\pm 2\%$
		B	: 50mV increments, $\pm 1\%$ accuracy (*2) e.g. ②=2, ③=8, ④=B $\rightarrow$ 2.85V, $\pm 1\%$
⑤	Packages	M	: SOT-25 (SOT-23-5)
		P	: SOT-89-5 (for XC6209 series only)
		D	: USP-6B (for XC6209 series only)
⑥	Device Orientation	R	: Embossed tape, standard feed
		L	: Embossed tape, reverse feed

(\*1) Maximum output current of E to H series depend on the setting voltage.

(\*2) Within  $\pm 30\text{mV}$  (V<sub>OUT</sub>  $\leq$  1.5V)

\* VOUT(T): Setting output voltage value

## OPERATIONAL EXPLANATION

Output voltage control with the XC6209/6212 series:

The voltage divided by resistors R1 & R2 is compared with the internal reference voltage by the error amplifier.

The P-channel MOSFET, which is connected to the VOUT pin, is then driven by the subsequent output signal. The output voltage at the VOUT pin is controlled & stabilized by a system of negative feedback.

The current limit circuit and short protect circuit operate in relation to the level of output current. Further, the IC's internal circuitry can be shutdown via the CE pin's signal.

### <Low ESR Capacitors>

With the XC6209/6212 series, a stable output voltage is achievable even if used with low ESR capacitors as a phase compensation circuit is built-in. In order to ensure the effectiveness of the phase compensation, we suggest that an output capacitor (CL) is connected as close as possible to the output pin (VOUT) and the VSS pin. Please use an output capacitor with a capacitance value of at least 1  $\mu$ F. Also, please connect an input capacitor (CIN) of 0.1  $\mu$ F between the VIN pin and the VSS pin in order to ensure a stable power input.

Stable phase compensation may not be ensured if the capacitor runs out capacitance when depending on bias and temperature. In case the capacitor depends on the bias and temperature, please make sure the capacitor can ensure the actual capacitance.

### <Current Limiter, Short-Circuit Protection>

The XC6209/6212 series includes a combination of a fixed current limiter circuit & a foldback circuit, which aid the operations of the current limiter and circuit protection. When the load current reaches the current limit level, the fixed current limiter circuit operates and output voltage drops. As a result of this drop in output voltage, the foldback circuit operates, output voltage drops further and output current decreases. When the output pin is shorted, a current of about 50mA flows.

### <CE Pin>

The IC's internal circuitry can be shutdown via the signal from the CE pin with the XC6209/6212 series. In shutdown mode, output at the VOUT pin will be pulled down to the VSS level via R1 & R2. The operational logic of the IC's CE pin is selectable (please refer to the selection guide). Note that as the standard XC6209B type is 'High Active/No Pull Down', operations will become unstable with the CE pin open. Although the CE pin is equal to an inverter input with CMOS hysteresis, with either the pull-up or pull-down options, the CE pin input current will increase when the IC's in operation. We suggest that you use this IC with either a VIN voltage or a VSS voltage input at the CE pin. If this IC is used with the correct specifications for the CE pin, the IC will operate normally. However, supply current may increase as a result of through current in the IC's internal circuitry

## NOTES ON USE

- 1 Please use this IC within the stated absolute maximum ratings.  
The IC is liable to malfunction should the ratings be exceeded.
- 2 Where wiring impedance is high, operations may become unstable due to noise and/or phase lag depending on output current. Please strengthen VIN and VSS wiring in particular.
- 3 Please wire the input capacitor (CIN) and the output capacitor (CL) as close to the IC as possible.
